

How To Guide

Step 1: Loading Actions in Photoshop

- Open a photo in Photoshop.
- Open the actions panel by going to Window>Actions
- Open the actions panel menu and select 'Load Actions...'
- Select the .atn file named '50 Duotone Effects.atn' and click 'Open'

Step 2: Applying the duotone effects

- Use the cheat sheet to choose which effect you want to apply
- In the actions panel, locate and select your desired effect #
- Click the play button to apply the effect

Step 3: Finishing touches (not required)

- Select the brightness/contrast adjustment layer
- Use the sliders to adjust the brightness/contrast to achieve your desired output
- Select the gradient map adjustment layer and click the gradient in the properties panel
- Use the gradient editor to adjust the colours if you wish

Tips:

- Delete both adjustment layers before applying a new effect
- Use high contrast for a more exaggerated duotone effect
