

Hello ❤️

Thank you for your recent purchase.
Here's a detailed guide to install Lightroom Presets on **Mobile**.

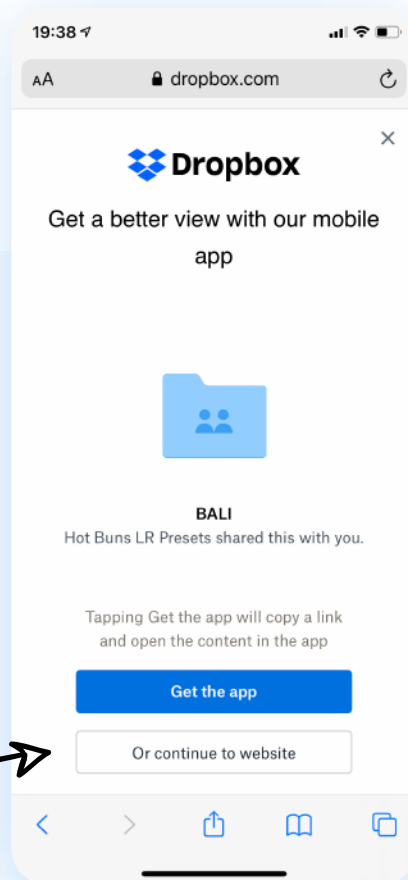

[DOWNLOAD 7 SUNKISSED PRESETS HERE](#)

Step 1

Download your presets
with the link above 🙌🙌🙌

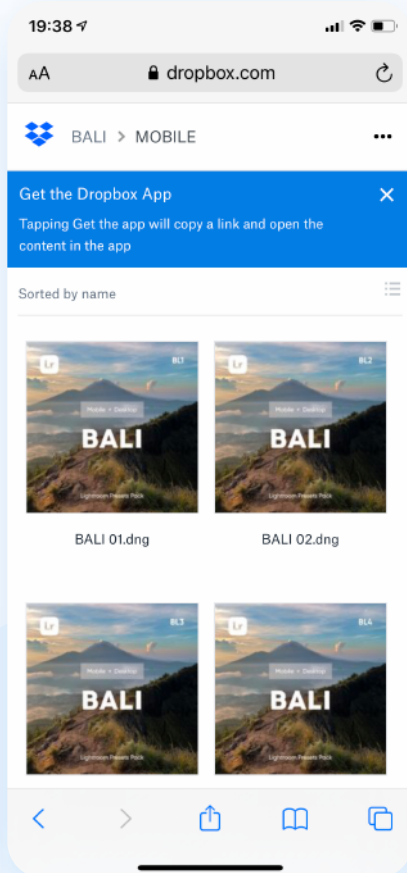

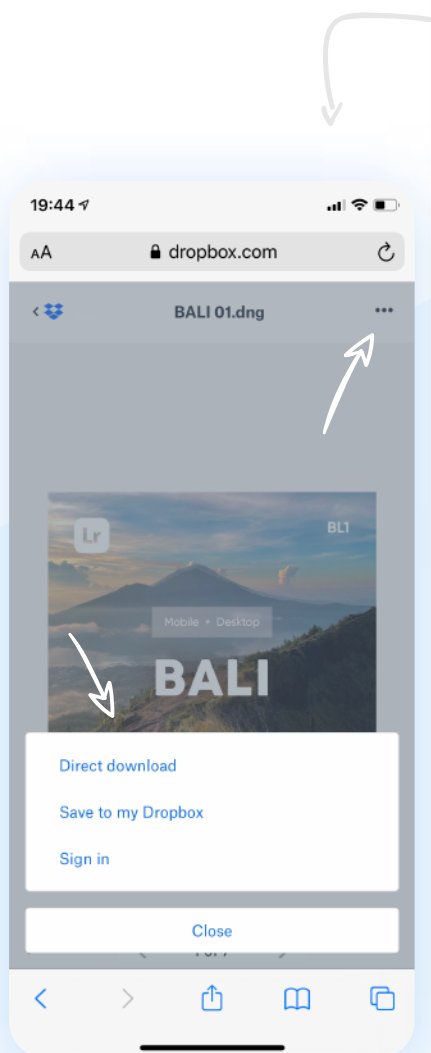

01

This will open a Dropbox window. Click "**Or continue to website**" to view the files within your browser. Please note that you do not need a Dropbox app for this step.

02

Open the **MOBILE** preset folder.
Tap on one of the DNG files to open it.

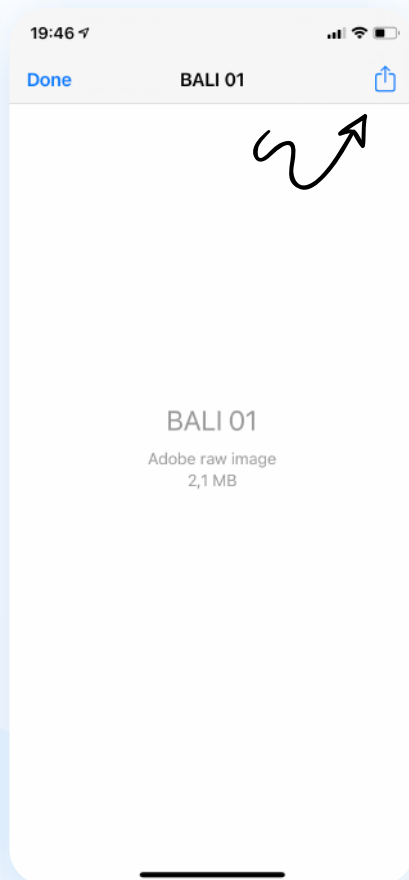

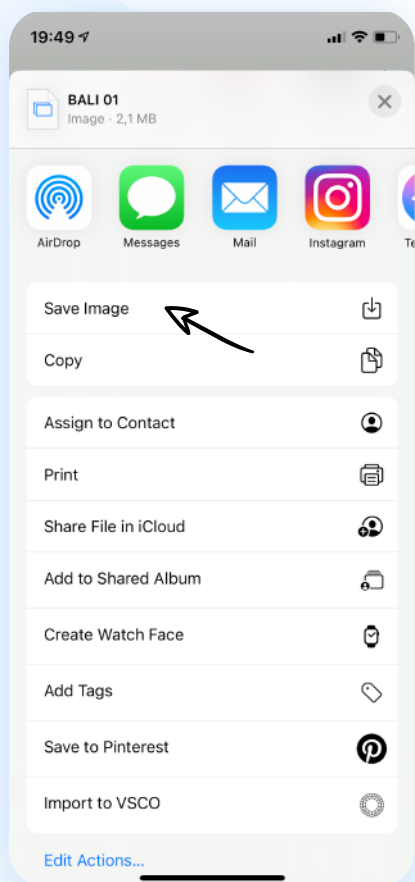

03

Tap the **3-dot menu (...)** at the upper right and select **Direct Download**. If you get a pop-up confirming the download, tap **Download** again.

NOTE: Do not long-press on the image and add to Photos. Your iPhone will convert it to a regular image and you will lose the preset settings.

04

Click on the **file + arrow** icon.

05

Click on **"Save Image"**, it will save the file on your camera roll. It will look blank (this is normal). Repeat this with all the other DNG files.

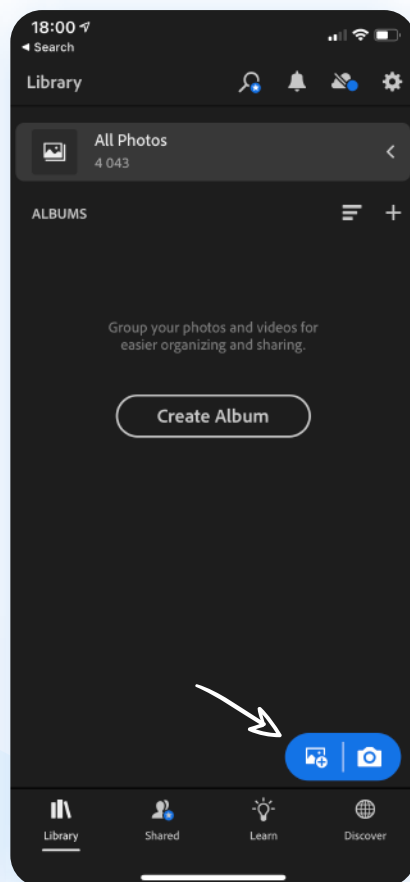

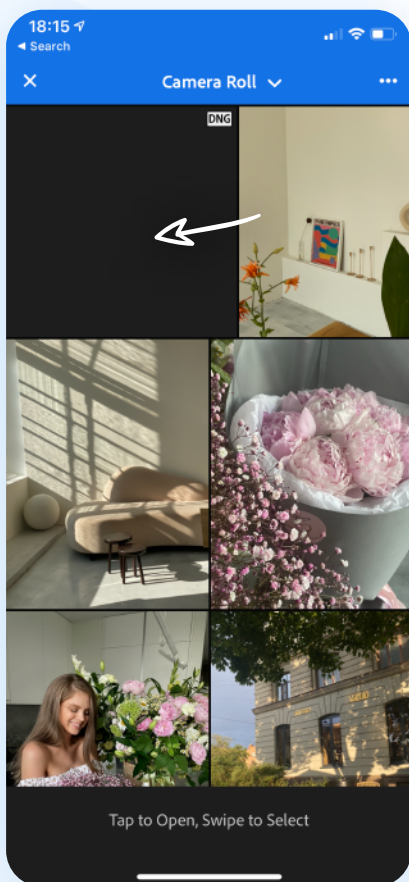

Now that the DNG presets are in your phone, you may now import them into your Lightroom mobile.

Step 2

Import your presets to Lightroom Mobile.

01

Open the Lightroom app and click on the image **+** icon to import presets you have just downloaded.

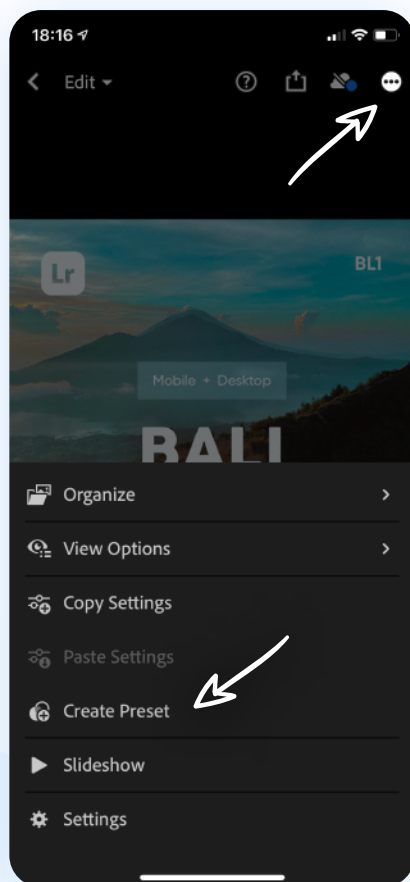

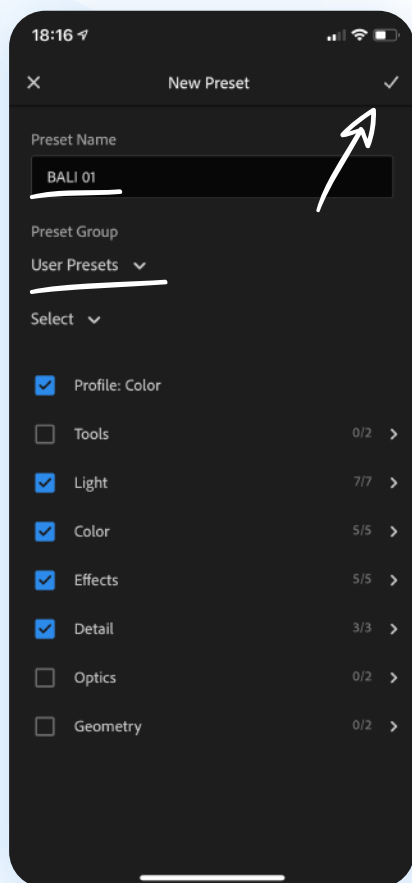

02

Select **DNG** files you just downloaded from your Camera Roll and import those in the app.

NOTE: It will look blank (again, this is normal).

03

Click on the **DNG** file you just imported. Then click on the **3-dot menu (...)** on the top right corner. Select "**Create Preset**".

04

Name the preset accordingly to the DNG file. **Select a folder** where you wish to add this preset to. You can also create a new folder. This will be important later, so you are able to find the presets. Click on the **tick** icon.

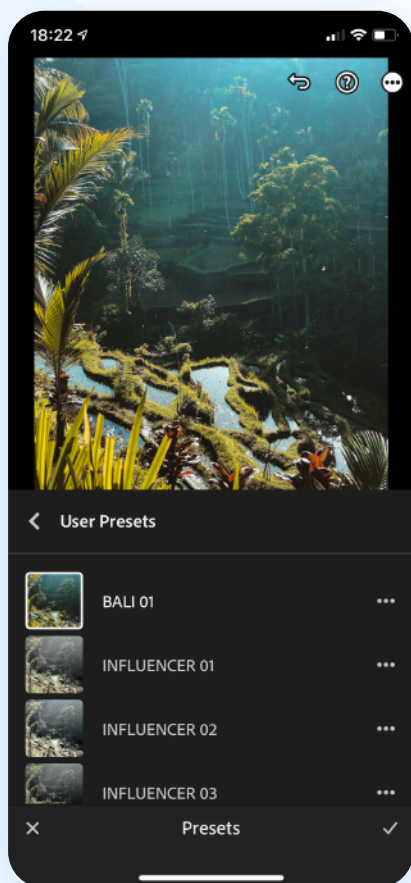

Your new presets have just been created 🎉

Step 3

Create beautiful photo edits with new presets.

01

Click on the image you wish to edit. Select from the bottom slider "Presets".

02

Select the folder where you saved the presets, and click on the preset in order to edit the image ✨

How to install Lightroom Presets on Desktop

Download your presets with the link below 📌📌📌

[DOWNLOAD 7 SUNKISSED PRESETS HERE](#)

01. Open Lightroom and go to the Develop module. On the left panel, look for the Presets panel and click the **+** icon next to it.

02. Select **"Import"** from the dropdown menu – it will open a window for you to find the ZIP file. Simply find the ZIP file and select it and Lightroom will import the presets.

03. Also you can simply drag preset files to Lightroom.

We hope the installation went well and you will like the presets! Don't forget to leave a review 🍷

Thank you so much,
Hot Buns Team ❤️
