

Depending on your purchase some of my downloads come as zipped folders whilst others come as a Photoshop PSD file. You will require unzipping software for this process.

Step 2: Open the PSD file

Double click on the PSD file to open the document. You should see either one of the following:

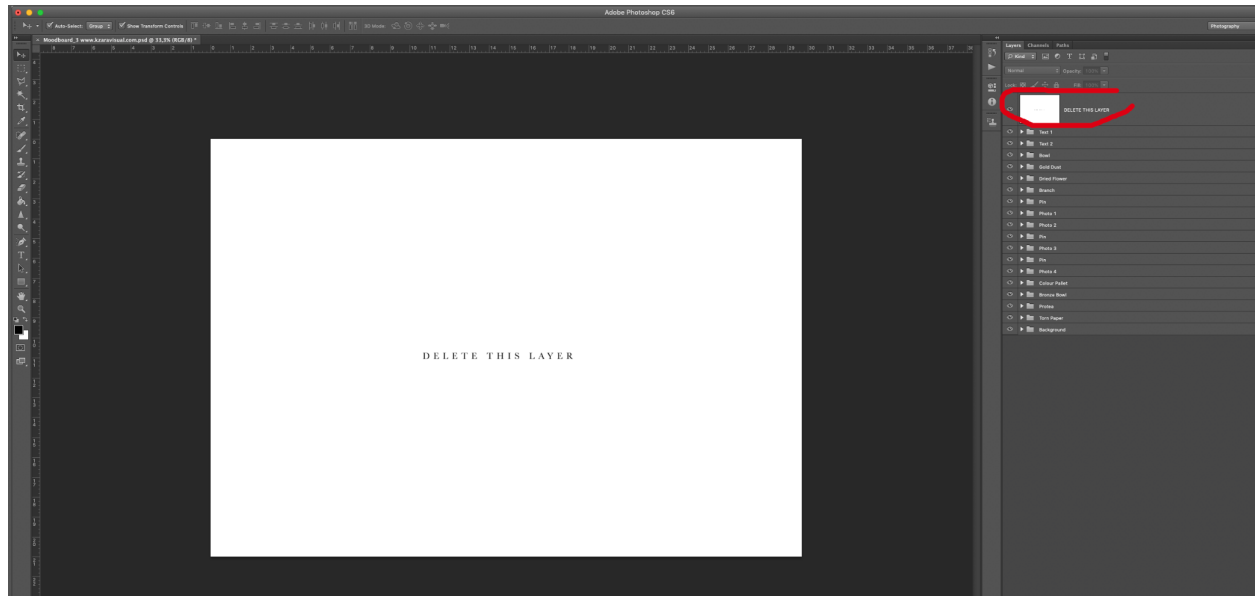

2.1_Blank white screen

2.2_The template file

Depending on what you see, skip to that step.

2.1_Depending on your download you may see a BLANK WHITE layer. If this occurs head to the layers tab on the right-hand side display. Here, you will see a layer that says “DELETE ME”. You will have to delete this layer to access the files.

2.2_If the template is under 20MB, then you will be able to access the PSD file without having to go through step 2.1.

Step 3: Begin editing your file

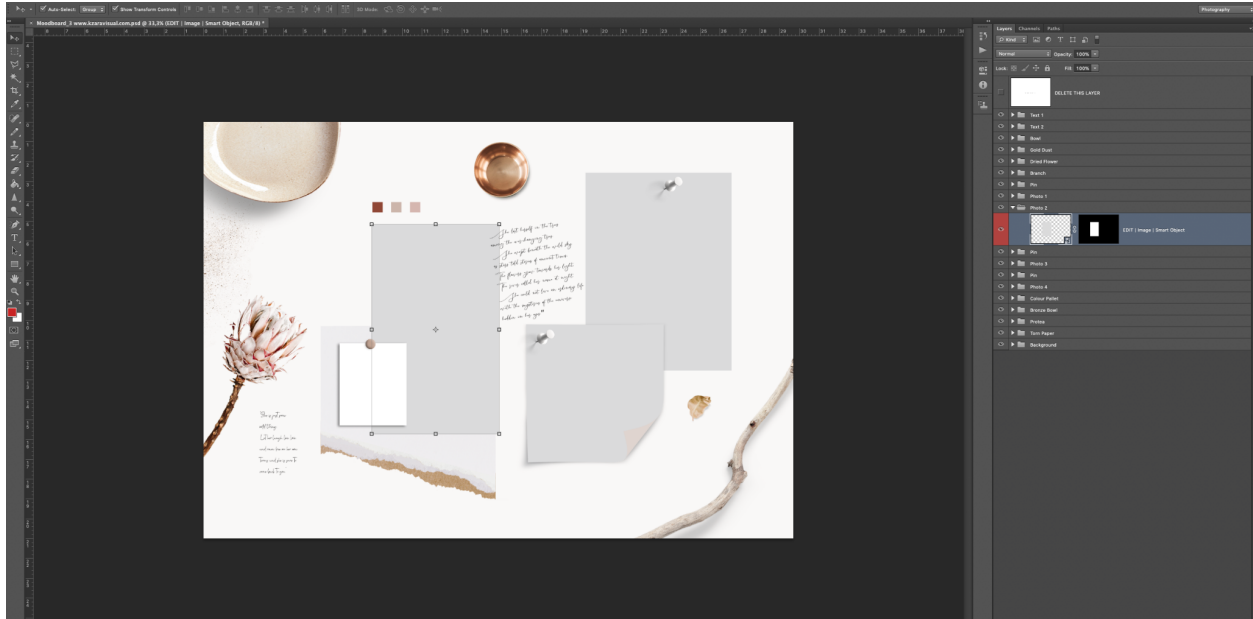

Most of our moodboard mockups include a few editable layers usually titled EDIT | Image | Smart Object.

Each moodboard mockup has layers that are categorized accordingly:

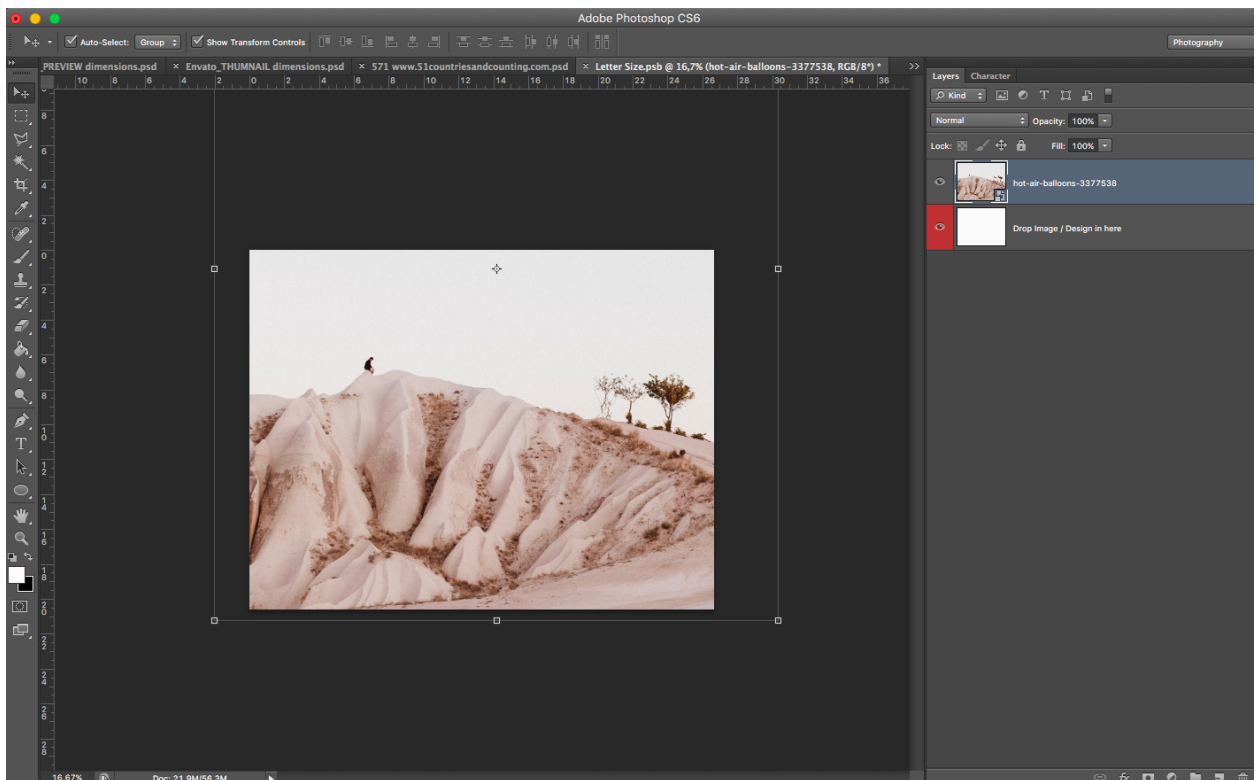

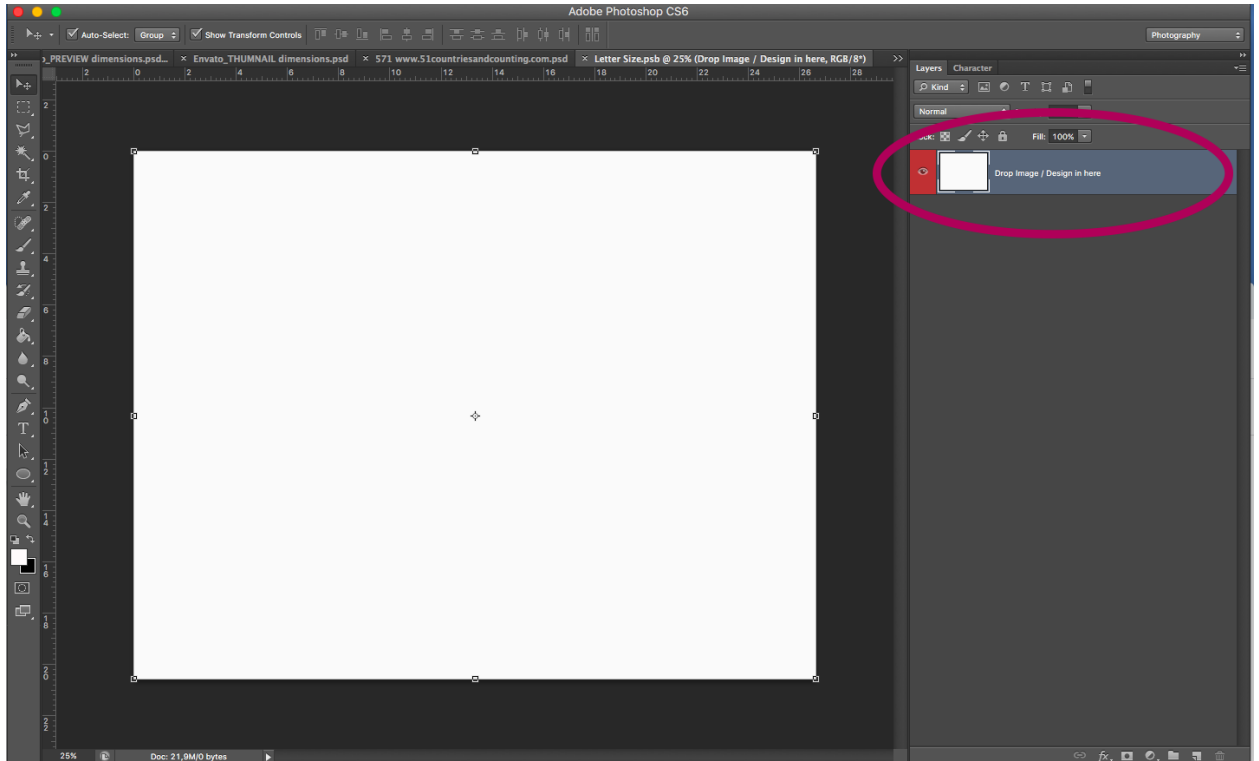

- A layer titled: EDIT | Image | Smart Object (*Usually highlighted in red*)
- A layer titled: DO NOT EDIT | Graphics (*Only appears in some cases, and can be found above or below the layer titled EDIT | Image | Smart Object*)
- An editable background layer

Step 4: Working with smart objects

In this step, we will be working with the layer named EDIT | Image | Smart Object (We have highlighted the layer in the screenshot below)

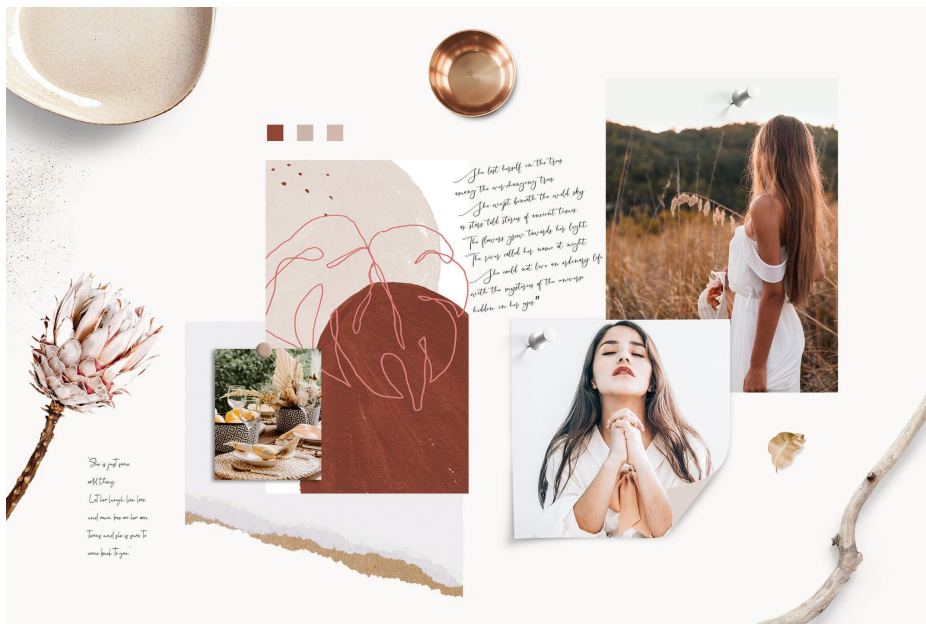

- Double click the layer EDIT | Image | Smart Object (*This is usually highlighted in red*)
- An independant photoshop file should now appear in a new photoshop window. In this file you could see either 1 (*one*) to 4 (*four*) layers. We will be working with the layer called Drop Image / Design in here. This layer is also usually marked in red.
- This layer is usually white, grey or cream. Neutral colours that allows you to effortlessly insert your Image / Design in here as either a Jpeg or as a PNG.
- Paste your design in this file. Click Save (*Ctrl + S*) and Close (*Ctrl + W*) the file.

- Depending on how your Photoshop is set up, this saves to the temporary Photoshop folder on your computer.
- After saving you will return to the original mockup file and your Image / Design will be automatically updated.

Step 5: Save your file

Your template is now ready to be saved. In order to keep using the template over and over again for other Images / Designs, we recommend saving the file as a different file name.

Thank you for your purchase

We hope that you just love our mockups as much as we love creating them for you.

Each month we create on average 50 to 100 new designs so keep visiting our store to see what else we have.

In addition to mockups, here is our full product range:

- Photoshop mockups and Design Templates
- Social Media templates
- Lightroom Presets
- Photoshop Overlays
- Mockup scene creator elements & PNG cuts
- Stock Video Footage (Both HD + Aerial, Drone)
- Stock Photography from 65 countries
