

# HOW TO USE **Lightroom Presets**

## Installing Lightroom Presets (.LRTEMPLATE / .XMP) on *Lightroom Desktop*

1. After unzipping the product files, locate the folder containing .lrtemplate files.
2. Go to View > Edit Panels > Preset Browser
3. Click the ... icon in the Presets Browser. Click Import Presets...
4. Locate your .XMP or .LRTEMPLATE presets in the file browser.
5. You can now begin using your presets! They'll be found under User Presets in the Preset Browser.

## Installing Lightroom Presets (.DNG) on *Lightroom Mobile*

1. Open your Lightroom mobile app.
2. Create a couple of albums by clicking the + icon beside Albums.
3. Use one to store your presets, and create another album in which to add your photos.
4. On the album where you store your presets, click the three dots to add photos from your Camera Roll.
5. Next, select all of the DNG files you've transferred to your phone's camera roll. They'll be added to that album.

### ***Using the Presets:***

1. When you're ready to apply a preset to a photo, visit your preset album. Select the preset of your choice, then click the three dots to copy its settings
2. To apply those settings to a photo, visit the album that contains your photos and tap on a photo. Click on the three dots to paste those settings to the photo
