

1. First download the preset file that has been provided or if you already have your own preset, skip this step and go directly to step number . Next, extract the preset file and put it in an easy-to-find folder.
2. Then move or copy the preset file with .xmp extension to the folder **Android > data > com.adobe.lrmobile > files > carouselDocuments > 0000000000000000 > Profiles > Settings > UserStyles.**
3. If it has been moved, try opening the Adobe Lightroom mobile application, tap on the Presets tab.
4. And all the presets that you moved earlier will appear there.
5. If the preset does not appear you can delete the Recent App by holding the Home button on the device, then delete the lightroom application running in the background and then reopen the lightroom application and see if the preset has appeared or not
