

## Step 1: Install Action file (.atn) file

After you have finished downloading our Clarity Glass Effect product. You will find a file labeled Divided.co - Clarity Glass Effect.atn. You will need to install this within Adobe Photoshop.

**To install the action, open up the Actions panel and navigate to the top right hand menu.**

Navigate down to Load Actions and once prompted select the Divided.co - Clarity Glass Effect.atn file in your downloaded folder.

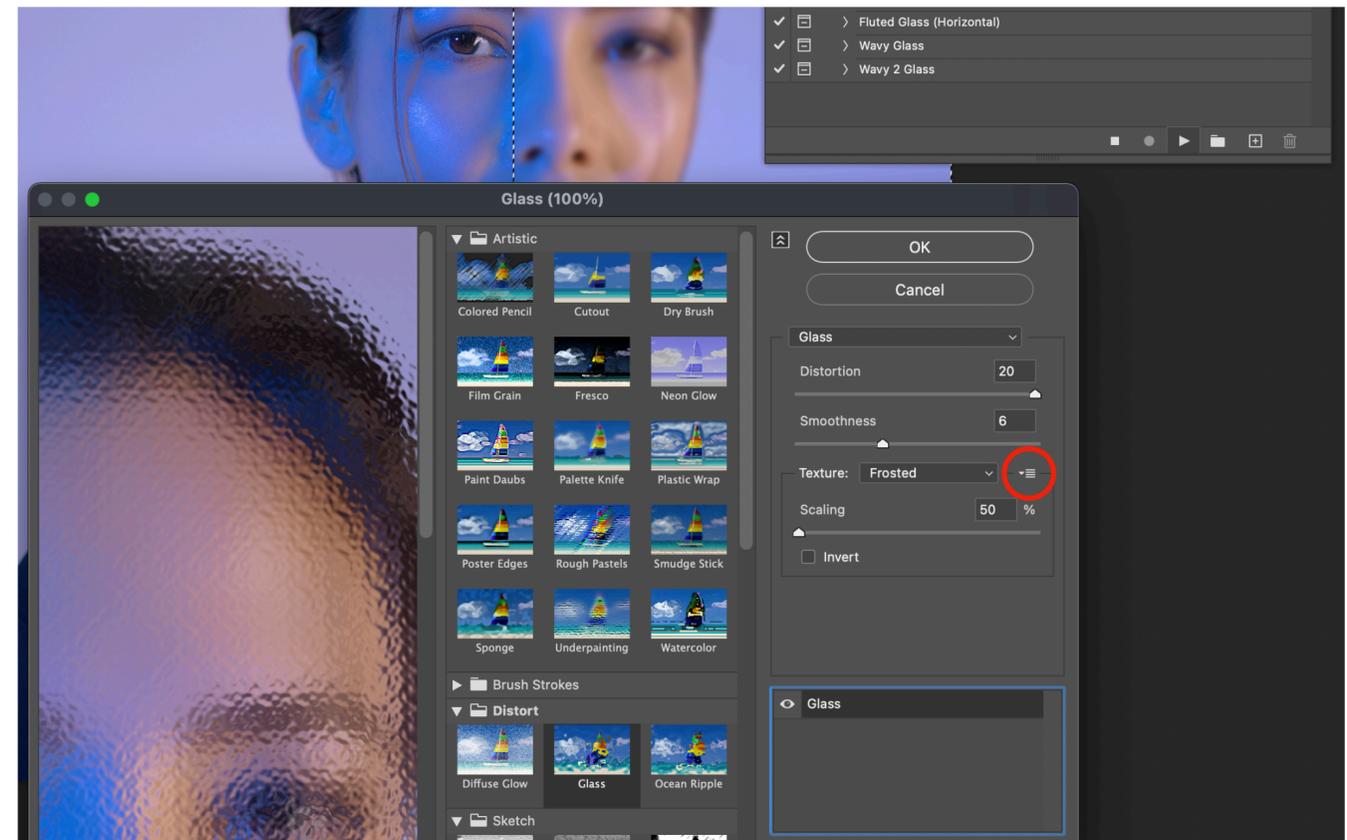

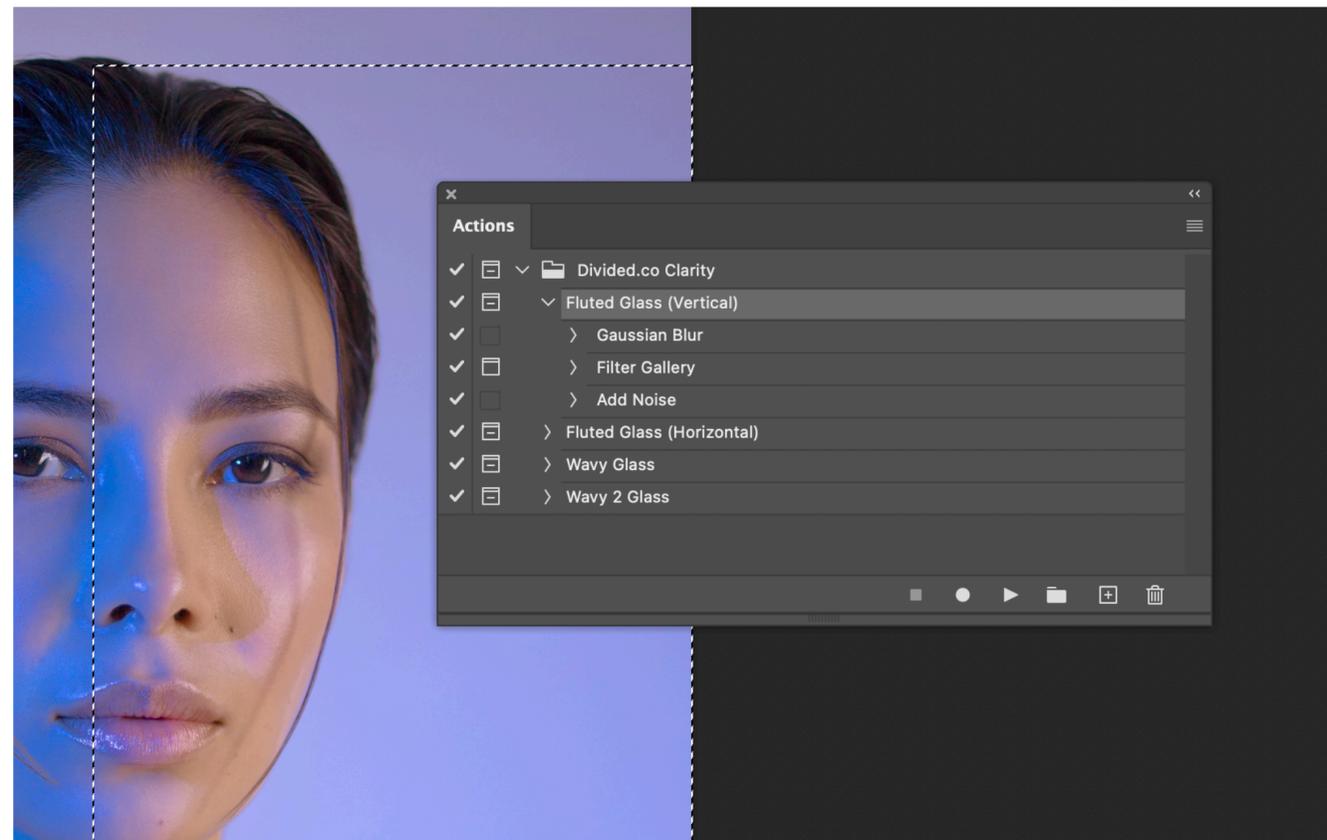

## Step 2: Play desired action and link to glass pattern

After you have installed the action file, you will see a set of 4 different glass overlay actions. In order for our action to work, you must select an area of the image or the whole image before clicking play. You must also be on the image layer.

In this example, we will use the Fluted Glass (Vertical) action.

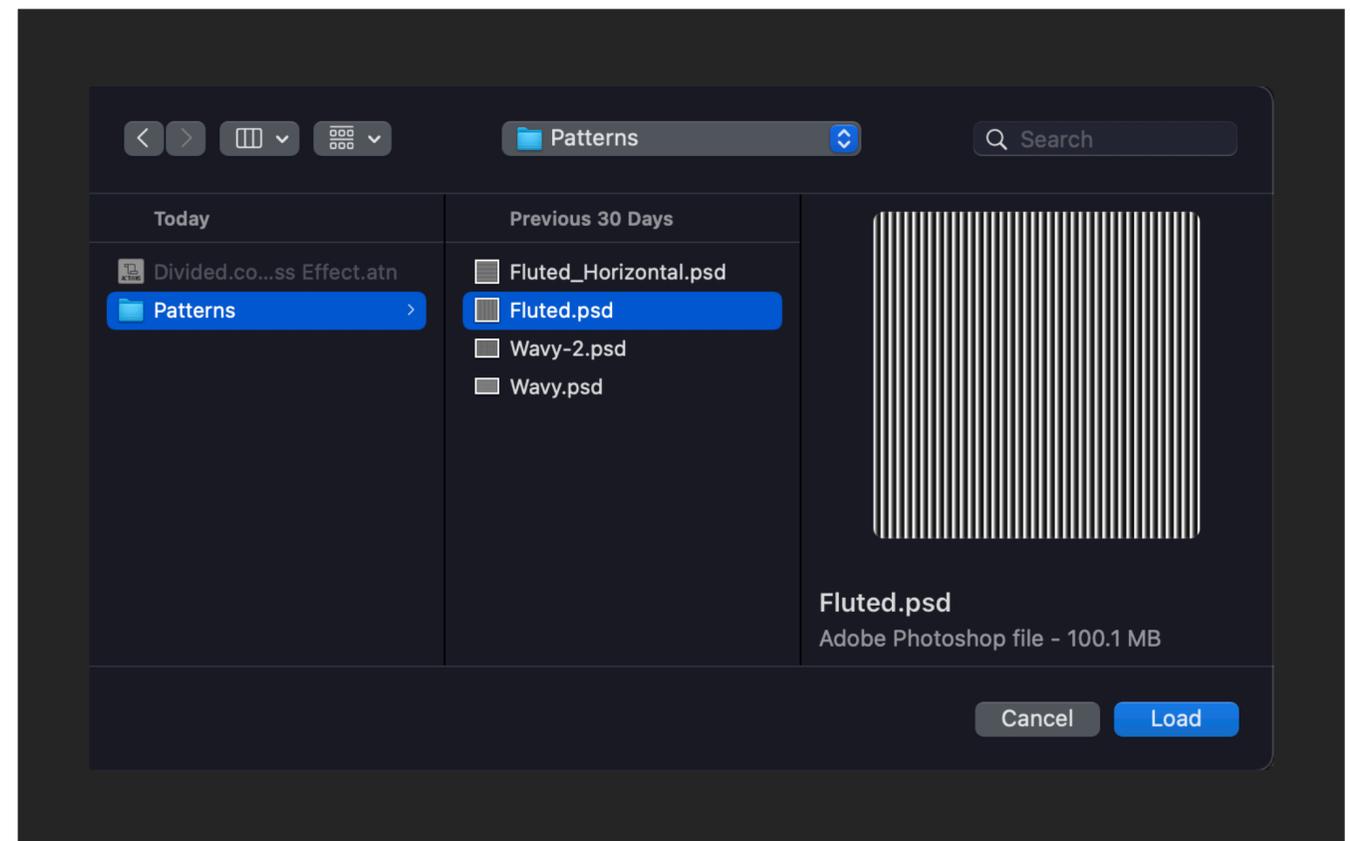

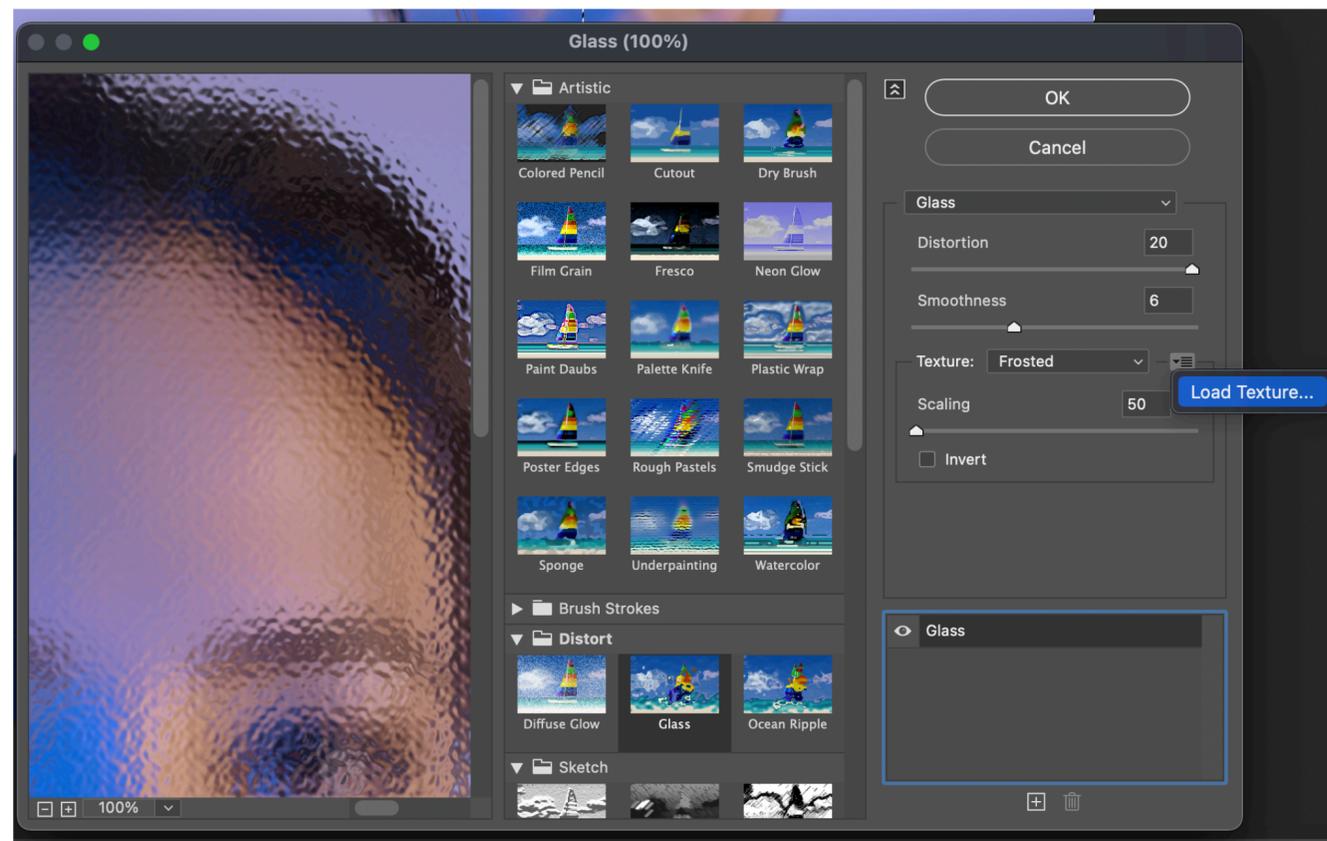

When you play your desired action, you will be stopped on the Filter Gallery step, where you will have to link the associated pattern to your selected action set.

Navigate down to the Texture section and click the menu option to the right of the drop down menu. Circled below in red.

An option will appear to Load Texture. Click this option.

You will then be prompted to load in your own texture. Here is where you will navigate to the Patterns folder from your original download and select the relevant glass texture to your selected action. We will load in **Fluted.psd** as we had selected the Fluted Glass (Vertical) action set. Once you have selected your desired pattern click Load.

You will now see your selected glass overlay loaded in. Here you can change the distortion, smoothness and scale to suit your design. Click OK which will let our action sequence finish.

Voilà! You are all complete. Repeat these steps for each of the different glass pattern action sets as necessary.
