Installing and running Brusherator!!!
Warning! This software will only run in Photoshop CC, CC2014, CC2015, CC2017 and beyond.
CS6 and below aren't supported.

I) Installing

1. Photoshop CC2015, CC2017+

- Goto http://zxpinstaller.com/, download ZXPinstaller for Win or Mac and follow the instructions
- Why do you need install 3rd party software? Adobe discontinued Extension Manager from CC2014 and currently there's no official way to install extensions for new Photoshops. ZXPinstaller uses the same executable that Extension Manager used but also works for CC2015 and CC2017

2. Photoshop CC, CC2014

- Find Adobe Extension Manager:
  On Windows:
  C:\Program Files\Adobe\Adobe Extension Manager CC\ (or CS6)

  On Mac:
  /Applications/Adobe Extension Manager CC/ (or CS6)

- or download it from http://www.adobe.com/exchange/em_download/
- Chose the Photoshop version you want to install Brusherator to, goto *File > Install Extension* and browse for .zxp file

3. Manual installation (if 1. or 2. don't work)

- Fo to Manual Install folder
- Unzip two .zips to
  On Windows:
  C:\Users\[USER]\AppData\Roaming\Adobe\CEP\extensions
  (to get there paste %appdata% to file browser and hit Enter)

  On Mac:
  /Library/Application Support/Adobe/CEP/extensions/

- Copy two .jsx files to Presets/Scripts folder of your PS

  Please refer to Install FAQ below if you're having any problems

II) Running

- Run from Window → Extensions → Brusherator
- Run preview panel from Window → Extensions → Brusherator Preview

III) Using

- There's a manual available at http://hundredsofsparrows.com/ttw/tools/Brsh/
- To assign hotkey, browse to Edit > Keyboard shortcuts and find toggleBrusherator.jsx and toggleAlternative.jsx in File > Scripts section of Application Menus.

Install FAQ

Q) I'm trying to install Brusherator with Extension Manager but I'm getting the message 'Failed to install. Please make sure the manifest of this extension is valid blabla'

A) Please make sure you have your version of Photoshop selected under the Products section of EM. If you don't see your PS there it's probably because you're using CC2015/CC2017 and Adobe discontinued the use of EM for CC2015/CC2017. There's no official alternative for CC2015/CC2017 so you can try 3rd party options (ZXPInstaller) or go with manual installation.

Q) I'm trying to install Brusherator manually but upon launch I'm getting the error 'The Brusherator extension could not be loaded because it was not properly signed'

A) When you unzip the .zip for manual installation it's crucial that all the files wouldn't be altered in any way and all the hidden files would land in destination folder. If you don't copy some of the files you'll get 'not properly signed' error.

If you still have problems, write me to kritskiy.sergey@gmail.com

Version history

05 dec 2016: Brusherator 1.2.0
- *Move several buttons at once*
- *Copy or move brushes between shelves*
- *Option to show shelves as tabs*
- *Create new tool and brush presets directly from Brusherator*
- *Rename and duplicate shelves*
- *Brusherator Plus: a second panel for more tools!*
- *Update current preset from Flyout menu*
- *More scripts for power users*
- *New buttons are added under the cursor (when added from RMB menu/hotkey)*
- *Fixed: flyout menu of other extensions creating shelves on Brusherator (whaaat)*
- *Fixed: empty lines in shelves*
- *Fixed: no need to switch of Current Tool Only Photoshop option anymore*
- *Fixed: wrong names of context menu items"*

16 nov 2016: Brusherator 1.1.0
- *Actions may be placed on a panel as buttons*
- *Flyout menu (CC2014+) — striped small thing on the right of the panel*
- *You can select shelves from flyout menu*
- *Option to toggle brush size inheritance for all buttons (default: size is inherited)*
- *Option to toggle names visible on image buttons (default: off)*
- *Option to close a panel after button click (default: off)*
- *Moving/resizing buttons in Edit Mode won't trigger them*
- *Button size ignores Photoshop UI font size option*
- *"Name on the panel " field is available for all types of buttons (so you could type a name for image button)*
- *"Use preset size " checkbox if you want to override brush size inheritance for specific tool*
- *"Select Preset(s)" dialog is taller*
- *Name filter field in "Select Preset(s)" dialog is available on CC2015+ on OSX (may be slow!)*
- *Brush selection is faster on Windows*
- *You can open Brusherator data folder from flyout menu (for backups)*
- *Current shelf is visible*
- *Fixed Brushes lose sensitivity some Windows users had*

11 nov 2016: Brusherator 1.0.1
- *fixed wrong thumbnails size when Photoshop rulers aren't pixels*
- *fixed text buttons with spaces in their names jumping all over the place*

10 nov 2016: Brusherator 1.0
10 nov 2016: Brusherator Preview 1.0
