

# INSTALLATION GUIDE FOR IOS (IPHONE)

Make sure your iPhone is under IOS 13 minimum.

1. Download it or the file (s) from the payment page or from the email you automatically received. Check your spam if you can't find the email (if you haven't received anything, please contact support).
2. Unzip the folder and drag the .dng files into your application files (on your iphone).
3. Open the Adobe Lightroom application and click the button with an image and a plus at the bottom right of your screen (see photo).
4. Choose "from files" and select a dng file (you can write the name of the preset in the search bar).
5. Open the photo.
6. Click on the icon with the 3 small dots at the top right of your screen then choose "create a predefined parameter".
7. Name the filter and save it.
8. Click on the icon with the image and the plus then select a photo of your own. Open there.
9. In the horizontal bar at the bottom of your screen, scroll until you reach the "Presets" option. Click then click on the title of the option "see photo"
10. Select the user defined parameters. 11. Your filter is installed; you can select it.

12. Repeat the operation with the number of filters you have in your order.

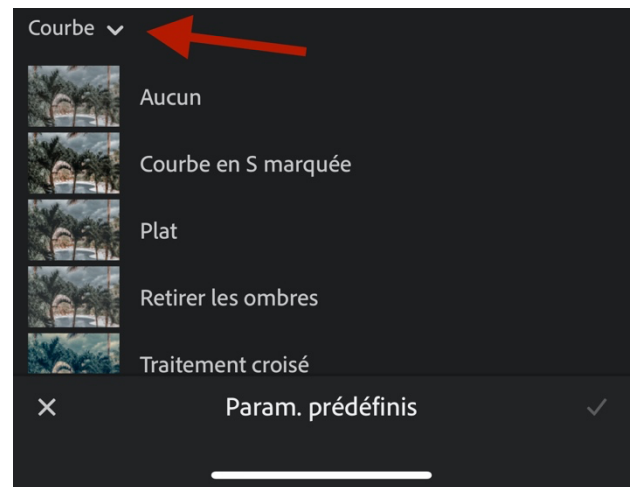

13. Your presets are installed. Now the filters will be available each time in the defined parameters.

14. Select User Presets.

15. Your filter is installed, you can select it.

16. Repeat with the number of filters you have in your order.

17. Your presets are installed. Now the filters will be available each time in the predefined parameters.

For any problem, please contact support from the "support" page.
