# LIGHTROOM PRESET GUIDE

**\*\* Please unzip the downlowded file before installing the presets in Lightroom.**

Thank You For Your

Support!

# How to unzip a file on a Mac

- You can unzip a file on a Mac by double-clicking on it, or by right-clicking and selecting "Open."
- The unzipped file will expand its content into a folder on your desktop.

# How to unzip a file on a PC (MICROSOFT)

- Locate the zipped folder that you want to unzip (extract) files or folders from.

- To unzip all the contents of the zipped folder, press and hold (or right-click) the folder, select **Extract All**, and then follow the instructions.

# Lightroom Preset File Types

- **.XMP** or **LRTemplate** format are for Lightroom Desktop, not Mobile.
- **LRTemplate** files are only supported by Lightroom 6 and earlier and Lightroom Classic prior to version 7.3.
- **LRTemplate** files were replaced by **.XMP files** with the release of Lightroom Classic CC v7.3 in April 2018.
- Mobile presets come in a **DNG** format.

# Lightroom Presets

## ***Kindly Note:

Each photo is unique with regards to how it was shot (settings, lighting and camera).  All these factors play a role in how the photo turns out when the preset is applied.

Feel free to tweak the presets slightly to suit your photo.

# How do I install new presets into Lightroom Desktop

1. From the menu bar, choose **File > Import Profiles & Presets or Import Development Profiles & Presets.**
2. In the Import dialog that appears, browse to the required path and **select the preset file** *(.XMP or LRTemplate)* that you want to import.
3. Click **Import**.
4. You can **apply your presets** on your photos in the Develop or Edit Section in Lightroom.
5. If you have **Lightroom Mobile** connected to your Lightroom account your presets will automatically be synced.

# How To Apply Your Lightroom Desktop Presets To Your Photo

First select the photo you want to apply the preset to.

Next ...

If you are using **LrC** select **Develop mode** at the top and then select the **Preset** you want to use. Your Preset should then be applied to your photo.
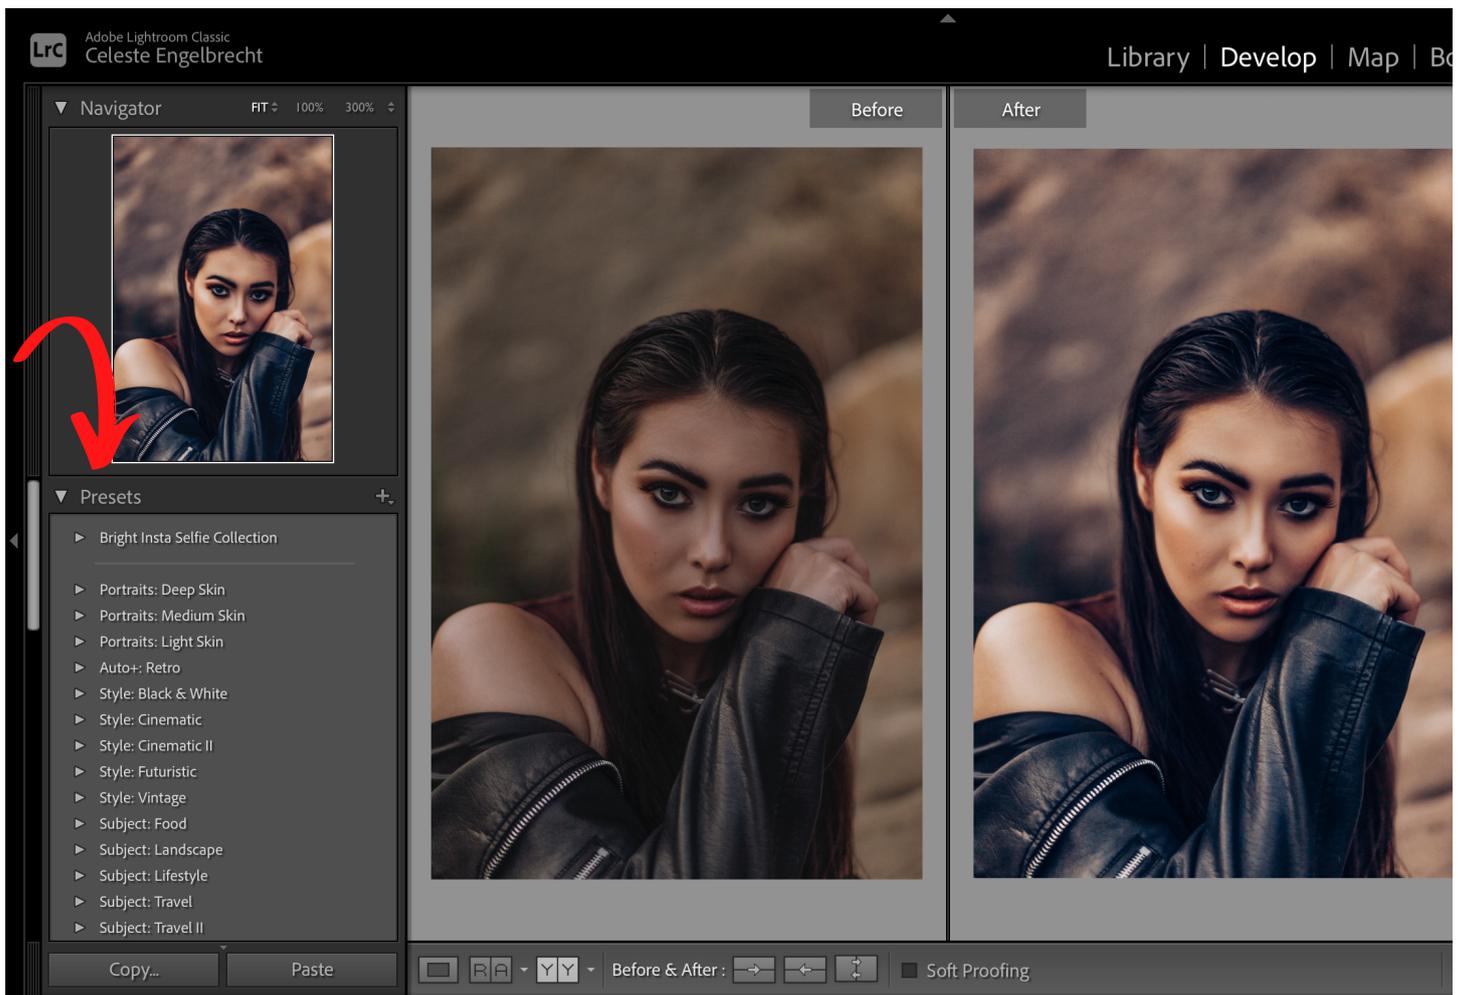

If you are using **Lr** select Edit at the top and then select **Presets.**
The **Preset** tab should open and you can select the preset you want to apply.
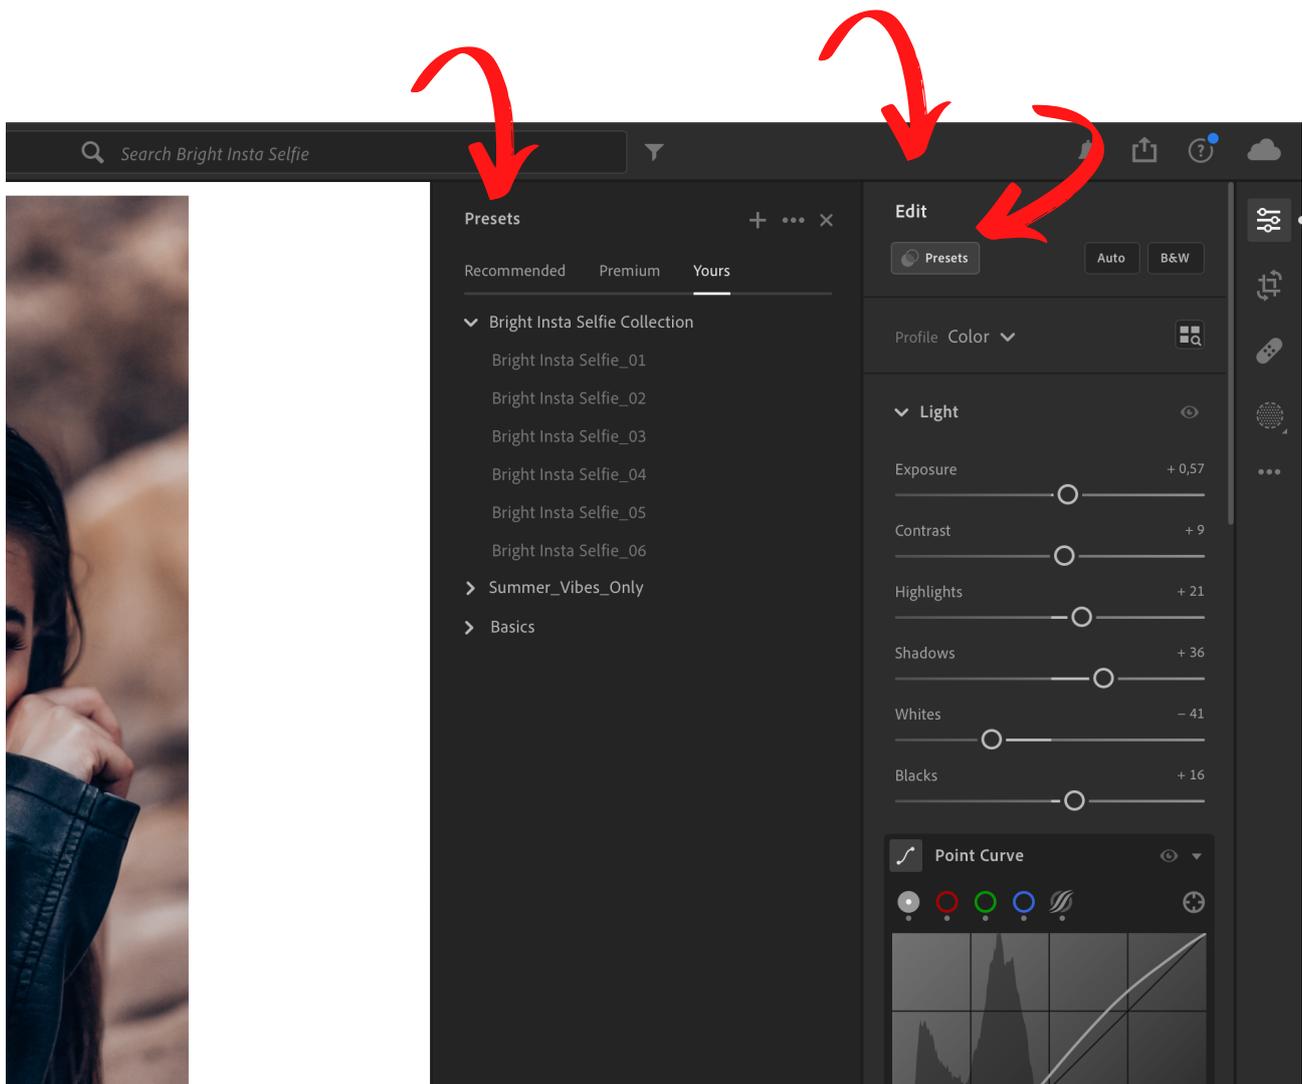

# How To Install Lightroom Mobile Presets

## Step1

Download the DNG files to your phone. They should appear in your camera roll.

## Step2

Import preset files (DNG) into Lightroom Mobile.

**  The DNG files serve as *"preset carriers"* and now you just need to add them to **Lightroom mobile** and save presets out of them.  If you go into your photo stream and see them as blank picture files, don't be alarmed – that's how they should look.

# Import preset files (DNG) into Lightroom Mobile.
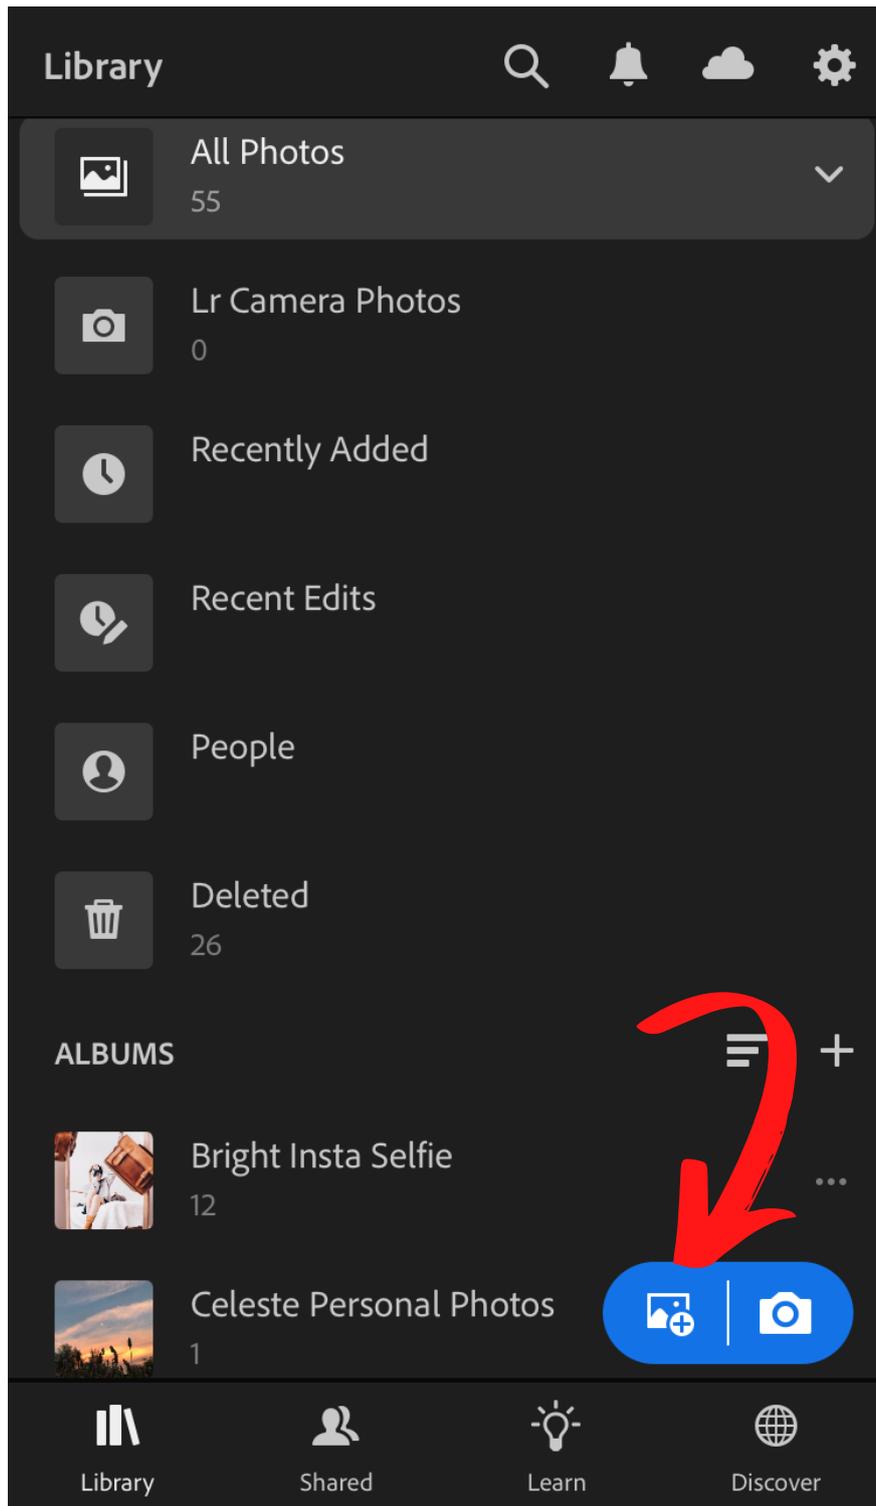

Select all the DNG preset files and tap **Add.**
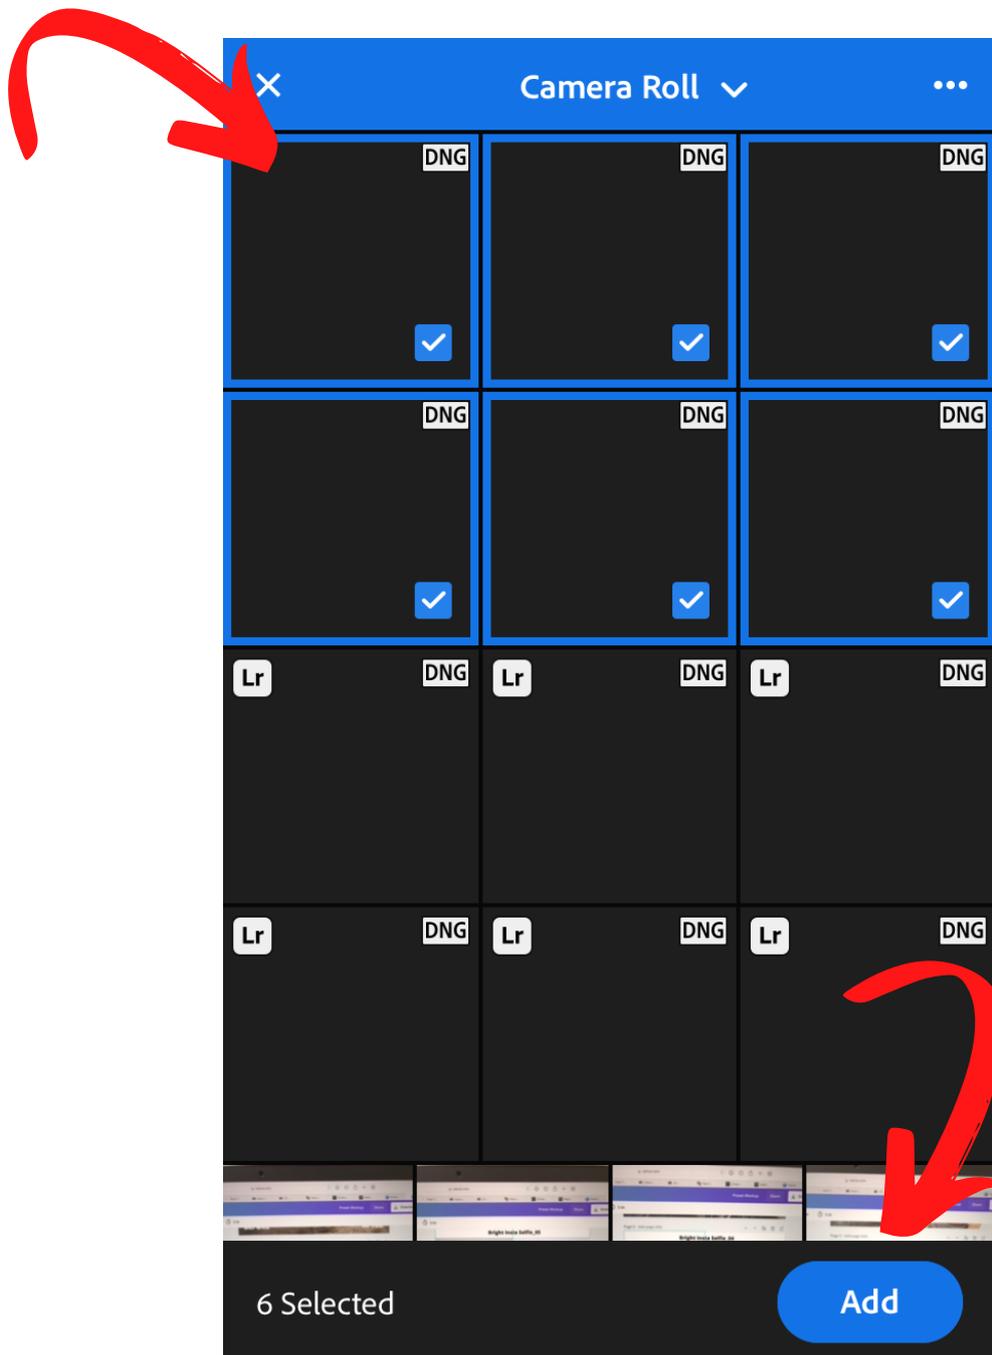

## Step 3

Locate the files and open one DNG file at a time inside the Lighroom app.

Now tap on the 3 dots icon at the top right side of the screen and then tap on Create Preset.

Name your preset and tap on the Check.

**\*\* Repeat this until all your Presets are added.**

Tap on the **3 dots icon** at the top right side of the screen

Then tap on **Create Preset**:

Name your preset and tap on the **Check.**
