# HOW TO INSTALL MILLENNIUM PRESETS IN THE FREE LIGHTROOM MOBILE APP

STEP 1: UNZIP THE FILES

The first thing you will need to do is unzip the folder of presets that you downloaded. You can easily do this on a computer. On a PC, just right-click on the zipped folder and choose "Extract All" from the menu of options. On a Mac, just double-click the file and Mac's unzipping utility does the rest.

Open
Open in new window

Extract All...
Pin to Start
Move to OneDrive
Scan with Windows Defender...
Open with...

Send to   >

Cut
Copy

Create shortcut
Delete
Rename

Properties

If you need to do this step on a iPhone or iPad, just tap on the zipped file and it will unzip. If you need to do this on an Android phone, you will need to download the Files by Google or WinZip app (Android app)to your phone. For more help on unzipping your Pretty Presets download on your phone, visit this page.

STEP 2: SAVE THE PRESETS

If you unzipped the presets on your computer, you will need to save the preset files to your favoritecloud storage option, so you can access them on your mobile phone. You will also need to be able to allow access to those files on your phone through that same cloud storage app.

If you unzipped the preset download on your phone, you can skip this step. Make sure you know where the unzipped files are located on your phone or device.

PPLA_Pink Lemonade.dng

PPLA_South Beach.dng ☆

PPLA_Spring Dreams.dng

PPLA_Sugar Cookie.dng

PPLA_Wedding Veil BW.dng

STEP 3: OPEN THE LIGHTROOM MOBILE CC APP

This step is really easy. Just open your free Lightroom app. Once its open, you can add the DNG/Preset files (next step).

STEP 4: ADD THE DNG/PRESET FILES

To add a preset, click on the (...) Settings option in the top-right corner of the app.

Choose the **Add Photos** option.
On the next screen, choose the location you will be pulling your DNG/Preset files from. If you have saved them to your phone, choose "From Camera Roll". If you have saved them to a cloud storage option, choose "From Files".
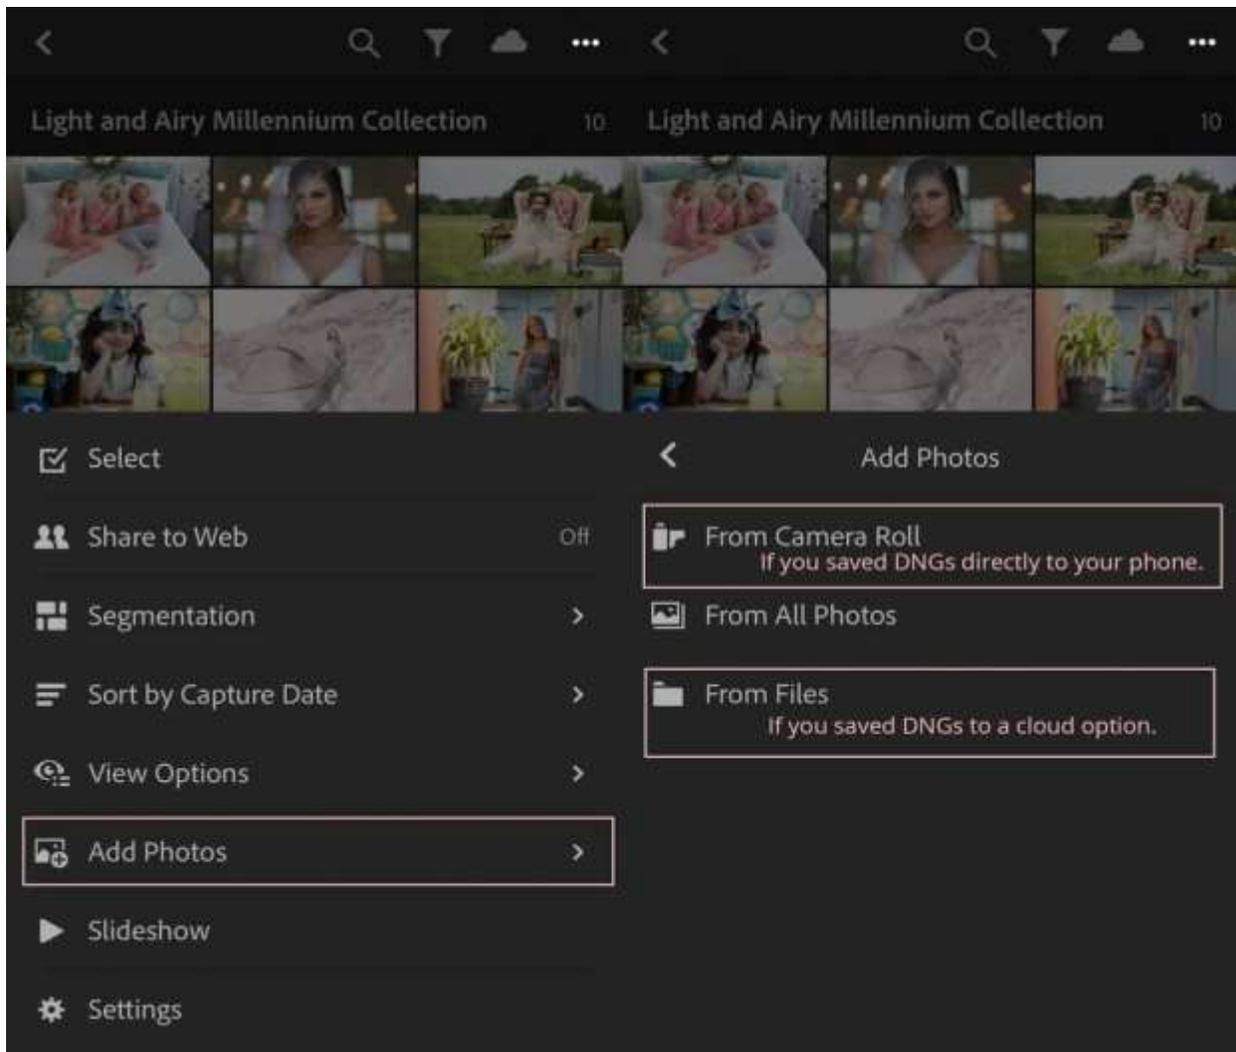

Select the DNG/Preset files you would like to import. This step may be a little different depending on your mobile phone, however most phones offer a way to select multiple files/images.

STEP 5: CREATE LIGHTROOM PRESETS FROM THE DNG FILES

Click on one of the newly imported files, then click on the three dots inside a circle in the upper right-hand corner of the screen. From there, choose "Create Preset" from the menu that appears.

Give your preset a name. We recommend to type the same name that is on the front of the preset image (to keep things simple).

You should also put the preset in a Preset Group. By default, it will be in the User Presets group. Creating a new group with your new collection's name will keep the presets from each collection together.
Do these same steps for each DNG/preset file.
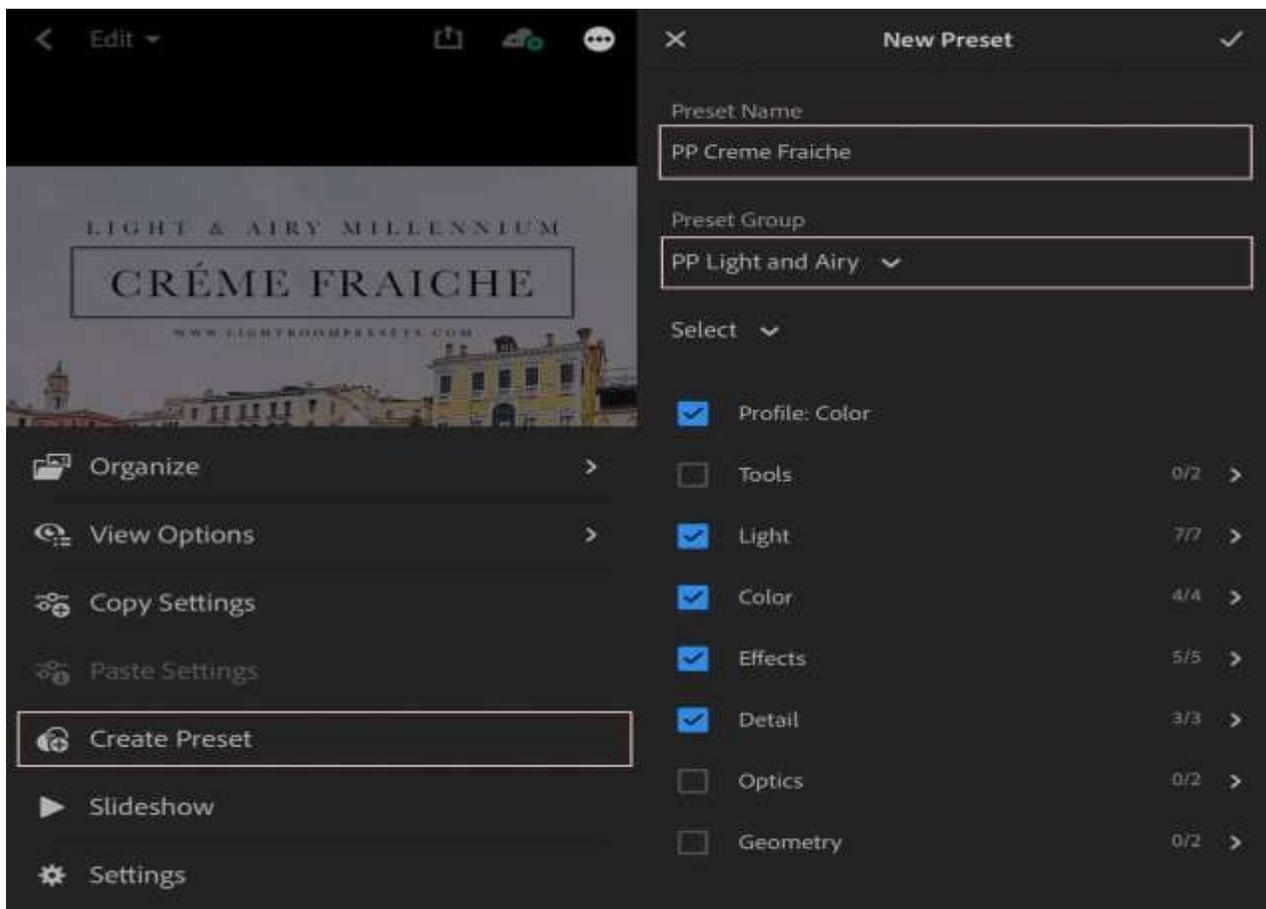

USING YOUR NEW PRESETS

Now for the FUN part!

Select an image in the Lightroom Mobile App that you would like to edit. Swipe left on the bottom options until you see "Presets" and tap on that option. It will open with your most recently used preset collection. By tapping on the collection name, you can choose the new collection you just installed.

Click through the presets until you find the one you like. When you are finished adding your preset, click the check mark in the lower right corner.

Enjoy!
