# HOW TO INSTALL LIGHTROOM PRESETS

1. On PC

Launch Adobe Lightroom. Import Photos that you want to edit. Then go to the DEVELOP tab and find Presets:

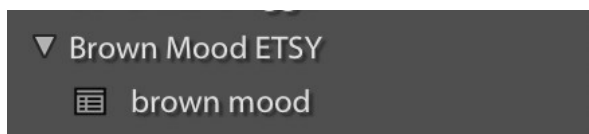

Here in tab Presets click on the "+" button and then on "Import Presets…":

Then choose the .xmp file you have downloaded from ETSY and click "Import":

That's it! Now you can find it in tab Presets (in the list of all presets):

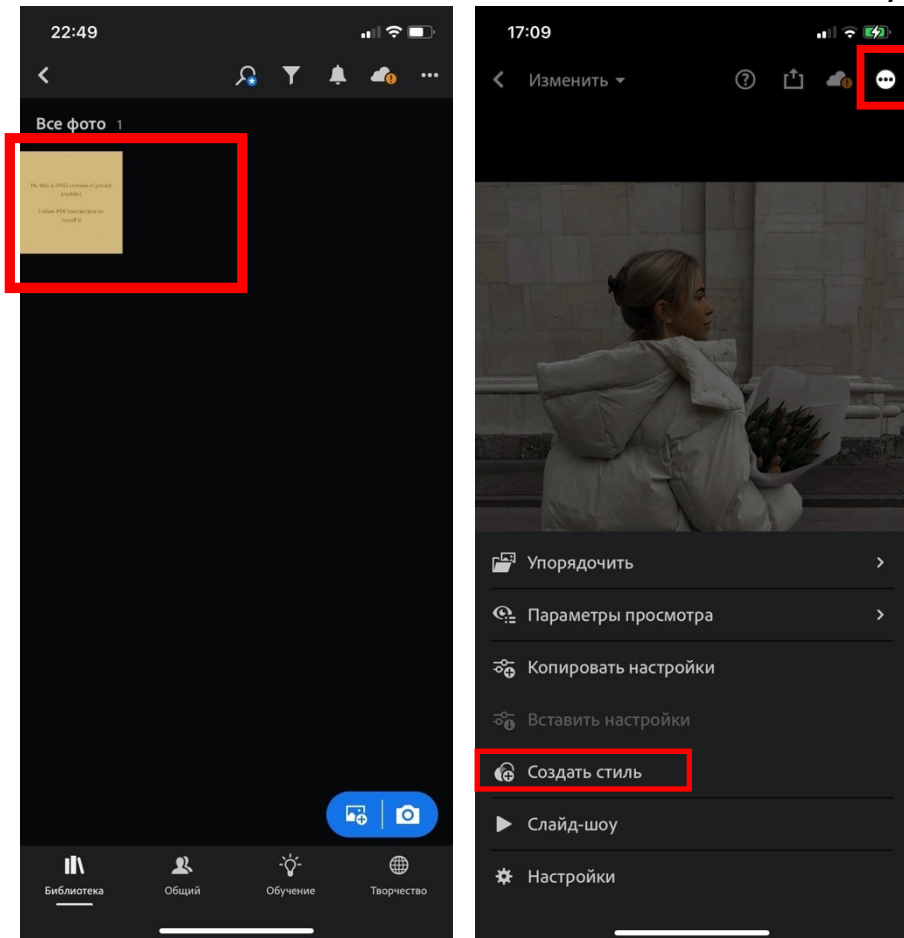

Note, that name of your preset can be another (not like on the screen above), because this instruction is universal.

2. On mobile

Download on your mobile .DNG file from the archive. Then open Lightroom app and click on the "+" button (I have the Russian app, so that's why all in Russian). Then open .DNG file (from Files or from Camera Roll, It depends on where you saved it):

Then go to the "All Photos" tab and choose the photo you imported – open it. The click on the "…" button and choose "Create style":

Name your style and click on the tick. That's it! Now you can find this style on the bottom panel in the styles tab. Open any photo and apply a style.
