

ANDROID INSTALLATION GUIDE

First you must download the application "Adobe Lightroom" and "Izip"

1. Download it (s) from the payment page or from the email you automatically received. Check your spam if you can't find the email (if you haven't received anything, please contact support).
2. Unzip the folder with the Izip application. You will receive a message saying "Would you like to extract all files? ". Do OK.
3. Find a .dng file. You should have the name of your preset + dng: ex: tropical.dng.
4. Click on the file and open it in the Photos application.
5. Your Photos app should open with the filter in question.
6. Click on the icon at the bottom with 3 points joined by 2 lines.
7. Click on "add to LR (Lightroom)".
8. Go to the Adobe Lightroom application and click on the filter.
9. Open the photo.
10. Click on the icon with the 3 small dots at the top right of your screen and choose "create a preset".
11. Name the filter and save it.
12. Click on the icon with the image and the plus and then select a photo of your own. Open there.

13. In the horizontal bar at the bottom of your screen, scroll until you reach the "Presets" option. Click then click on the title of the option "see photo"

14. Select User Presets.

15. Your filter is installed, you can select it.

16. Repeat with the number of filters you have in your order.

17. Your presets are installed. Now the filters will be available each time in the predefined parameters.

For any problem, please contact support from the "support" page.
