EARTHY PRESETS

DOCUMENTATION

INSTALLATION FOR
ADOBE LIGHTROOM

Lightroom Creative Cloud on Mac or Windows:

- Download your purchased Lightroom Presets which will come in a .zip file and upack it.
- Start Lightroom Creative Cloud and select an image.
- Click on File -> Import Profiles and Presets in the head menu.
- Navigate to the folder where you unpacked the .zip and select files from the "Lightroom CC 2019-2021+" folder.
- Now all Presets are ready to be used. Just open the Presets Panel on the right side and click on a Preset to apply it.

Lightroom Classic (version 7.3 or later) on Mac or Windows:

This instruction will guide you through the installation process for Adobe Lightroom Classic version 7.3 (since April 2018) and later which are using the .xmp preset format.

- Download your purchased Lightroom Presets which will come in a .zip file and upack it.
- Start Lightroom, navigate to the Develop Module and click on File -> Import and Develop Profiles and Presets in the head menu.
- Navigate to the folder where you unpacked the .zip and select files from the "Lightroom CC 2019-2021+" folder.
- Now all Presets are ready to be used. You find them in the Presets section on the left.

Lightroom 4, 5, 6 and Lightroom Classic (version 7.2 or older) on Mac or Windows

This instruction will guide you through the installation process for Lightroom 4, 5, 6 and Lightroom Classic (version 7.2 before April 2018 or older) which are using the .lrtemplate preset format.

- Download your purchased Lightroom Presets which will come in a .zip file and upack it.
- Start Lightroom. If you are a Windows user click on Edit -> Preferences in the head menu. Using a Mac you have to click Lightroom -> Preferences in the head menu.
- Click on the Presets tab in the new opened window.
- Click on the button named: Show Lightroom Presets Folder (older versions) or Show All Other Lightroom Presets (newer versions). Navigate to the Develop Presets folder which you will find in the Lightroom folder.
- Copy the contents of the "Lightroom 4-CC 2018" folder from the unpacked .zip to the Develop Presets folder.
- Restart Lightroom and all Presets are ready to be used. You find them in the Presets section on the left.

CANOPY

INSTALLATION FOR ADOBE PHOTOSHOP:

1. Download, locate and unpack the ZIP.
2. Copy the contents of the the "Photoshop ACR" folder (.xmp files) in the following location:
Mac*:
(user)/Library/Application Support/Adobe/Camera Raw/Settings
* Depending on your MacOS version, the Library menu may be hidden. To show it, hold the Option key while selecting the "Go" menu in the Finder.
Windows:
(user)\Application Data\Adobe\Camera Raw\Settings
or
C:\Users\(user)\AppData\Roaming\Adobe\Camera Raw\Settings
3. Make sure you only copy the preset files (.xmp) into the "settings" folder specified above (folders are not supported in Adobe Camera Raw).

HOW TO USE:

1. With RAW files, Adobe Camera Raw will launch automatically.
2. With JPEGs, one of the ways to open them in Adobe Camera Raw is to launch Adobe Photoshop, choose Open As..., select Camera Raw from the file types list and then select the file(s) you want to open.
3. Then the usual Adobe Camera Raw dialogue will appear in Photoshop. The Presets tab is a next-to-last tab on the right panel.
4. If you've already copied the presets to the Settings folder (see installation), all of them will appear there.
5. If you haven't, just hit the small menu icon (3 lines) in the top right corner of the panel and select "Load Settings". Then browse for the preset to open it from disk. This will load and apply the selected preset, but you'll have to browse for the next one again (so it's better to install all of the presets first).

CANOPY

MOBILE VERSION

INSTALLATION & USAGE FOR MOBILE:

Method 1
(WITH active Adobe Creative Cloud subscription)

You need to install all Presets in the Lightroom desktop application first. It is important that you use the Adobe Lightroom Creative Cloud and not the Adobe Lightroom Classic application. After installing all Presets they will automatically be synced to your mobile device via cloud.

Method 2
If you are a free user of Adobe Lightroom mobile app, please use this method:

1. Use .dng presets from the Mobile folder provided in the ZIP. Optionally, you can upload them to the cloud to download from your phone directly.
2. Open the .dng file(s) of the preset(s) in your Adobe Lightroom app and tap "Copy settings", then open the photo you are working with and hit "Paste settings" to apply the preset. This method will work only for one preset at a time.
