Installation Guide for Lightroom Mobile App (iPhone / iOS 13)

1. Download the .ZIP files containing the presets by clicking the "ACCESS DOWNLOAD" button on your order confirmation page.
2. Once the download is done, press on the download icon in the upper right corner of your browser and click on the .ZIP files you have downloaded from step 1, this will open the "Files" app.
3. Next, simply click the .ZIP files to extract the content in a new folder.
4. In the Lightroom app, open or create an album, then from that album, click on the blue "Add Photo" icon, navigate to the new folder created in step 3, select all .DNG images and click open.
5. To create the presets, select the first .DNG and press on the three dots in the top right corner. Then from the menu that appears, click on the 'Create Preset' button.
6. Name the presets, we recommend using the name of the pack to keep things simple.
7. Under "Preset Group", click "User Presets" and then "Create New Preset Group", choose a name and click on "Done". Then, click on the check mark in the top right corner to create the preset
8. Repeat the step 5 and 6 for every other .DNG
9. You're done! Your presets will now be available from the presets tab at the bottom in the new group you've created. You can simply click on it to apply it to your selected photo

Installation Guide for Lightroom Mobile App (Android)

1. Download the .ZIP files containing the presets by clicking the "ACCESS DOWNLOAD" button on your order confirmation page.
2. Open the Lightroom app and select or add a photo from your library.
3. Once the photo is selected, click on the 'Presets' tab in the bottom menu.
4. Press the 3 dots in the top next to the check mark, then click on 'Import Presets' from the menu that appears.
5. Next, from the file explorer that appeared on your screen, navigate to the .ZIP file downloaded from step 1 and click on it. (If it doesn't work with the .ZIP file directly, you'll need to use the "My Files" app on your phone to extract the contents of the .ZIP file first.)
6. You're done! Your presets will now be available from the presets tab at the bottom in a new group. You can simply click on it to apply it to your selected photo

Lightroom CC Desktop (.XMP files)

1. Unzip the folder you downloaded.
2. Open Lightroom CC and select the image you want to edit.
3. Navigate to 'File' > 'Import Profiles and Presets'
4. Navigate to the preset folder you unzipped and select the folder named 'Lightroom Desktop (.XMP)'.
Lightroom Desktop (.XMP)'
5. You are ready to apply your presets! Simply open the Preset Panel on the right-side of your screen and use the small triangle to open the folder. Click on the preset inside the folder to apply it on the picture.

Lightroom Classic Version 7.3+ (.XMP Files)

1. Unzip the folder you downloaded.
2. From Lightroom Classic, navigate to the 'Develop' module in Lightroom and click on 'File' > 'Import Develop Profiles and Presets'.
3. Navigate to the preset folder you unzipped and select the folder named 'Lightroom Desktop'
4. You are ready to apply your presets! Simply open the Preset Panel on the right-side of your screen and use the small triangle to open the folder. Click on the preset inside the folder to apply it on your picture

Frequently Encountered Issues

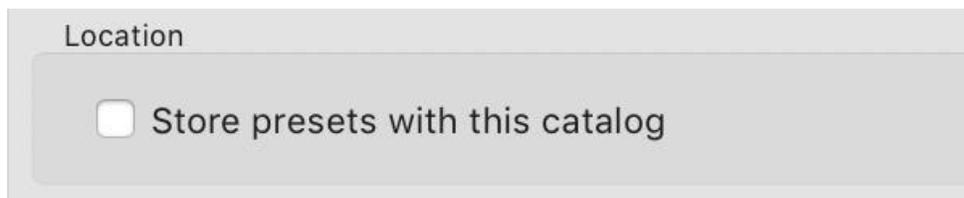

Duplicate or Invalid while importing error DESKTOP

Usually that error message means either two things:

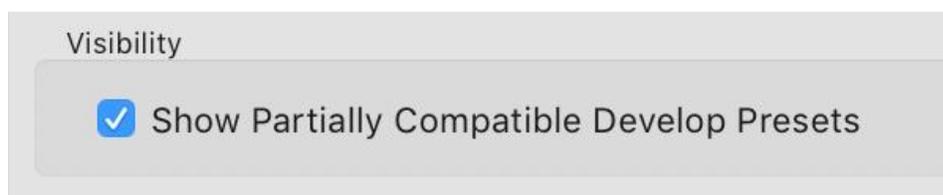

1. The presets were already imported once, but ended up in a hidden folder (usually they will be under 'User Presets' on desktop Lightroom)
2. You are using an older version of Lightroom, even though the presets will still fully work, Lightroom will by default hide those presets because they are marked as 'partially incompatible'. What you can do to fix that issue is to click the three-dot icon in the upper-right corner of the Presets panel and deselect 'Hide Partially Compatible Presets'.

LR Classic imported presets not appearing

1. Make sure that you have at least one image imported into your Lightroom Classic Catalog. The preset panel will remain completely blank if the Catalog is empty. If you do have at least one image imported already move to step (2)
2. Please check your Lightroom Classic preferences (Top menu bar > Preferences > Presets > Visibility). If you see the option "Store presets with this catalog" checked, please uncheck it for your presets to appear.

3. With recent Adobe updates, Adobe automatically hides presets that are missing profiles. For Lightroom Classic CC 8.1 and later, please check your Lightroom preferences (Top menu bar > Preferences > Presets > Visibility). If you see the option "Show Partially Compatible Develop Presets" unchecked, please check it for your presets to appear.

Unzipping File Android / IOS

Android:

You can use the free app 'Files' by Google to unzip the file on your phone or tablet :

<https://support.google.com/files/answer/9048509?hl=en>

Here is a link to get the app from the Play Store:

https://play.google.com/store/apps/details?id=com.google.android.apps.nbu.files&hl=en_CA&gl=US

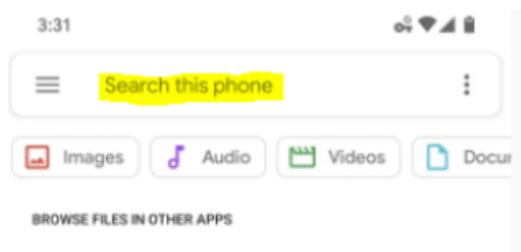

iPhone/iPad:

No apps required! You can simply follow these very simple steps instead:

<https://www.macrumors.com/how-to/zip-and-unzip-files-iphone-ipad/>

Cannot find preset on phone

Android: Use the app 'Files by Google' and use their search functionality to find your presets by typing in the name of the purchased pack.

iPhone/iPad: Use the search function on the 'File' app that comes with your phone to find your presets by typing in the name of the purchased pack.
