

First of all, thank you very much for your purchase.

The product you have purchased is an adobe illustrator text effect. It only works with adobe illustrator.

First open the .eps file. Then, if there is no font used in the text effect among your fonts, it will appear with a default font. If you want to use the font that appears in the preview jpg, adobe illustrator will show you the font name. You can google it and find it. In general, the fonts on the dafont site are used. You can use other fonts if you wish.

Once you've passed this step, double-click the text. And you can write any word you want. It's so practical to use:

Font and edit; More information YouTube link;

-----

Apply the effect to shapes;

Go to Window > Graphic Styles. There you will see the + icon at the bottom. Click that + icon with the text effect selected. The text effect has now turned into a graphic style. You can now apply the effects in the text effect to the shape you want. Then draw the shape you want. With the shape selected, click the graphic styles we created. This is how text effects will be processed on your shape.
