

Croma Store is an independent design studio dedicated to carefully craft and maintain quality tools for creative people and businesses. Our goal is to create trendy design that is simple, clean and useful.

# Thanks for your purchase!

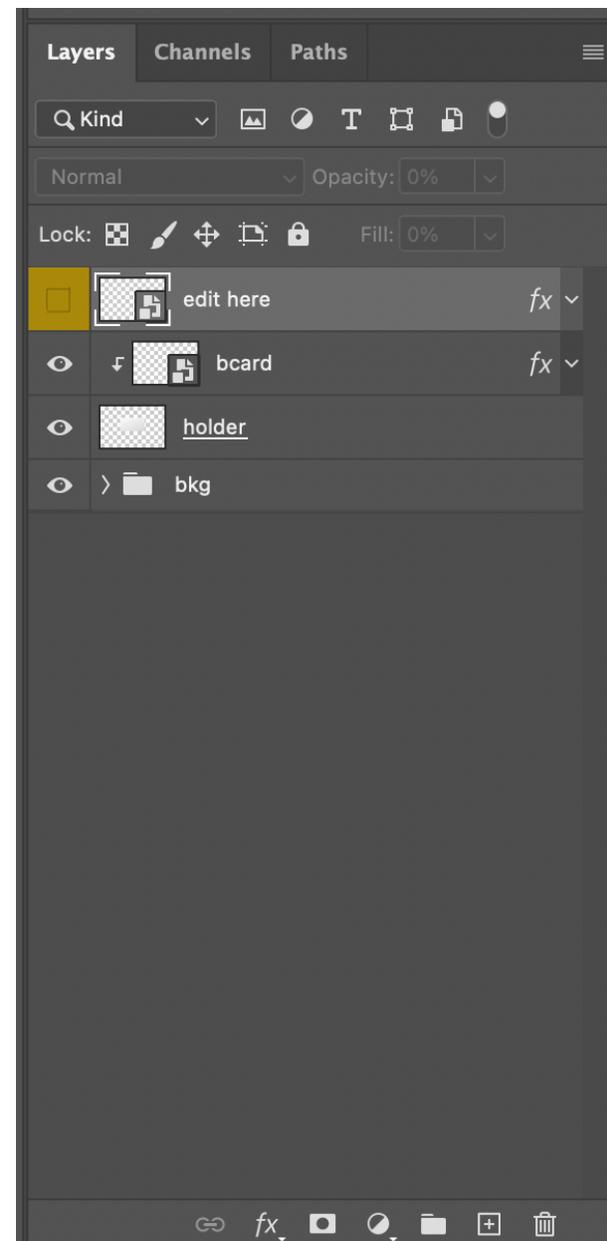

## How to use this package

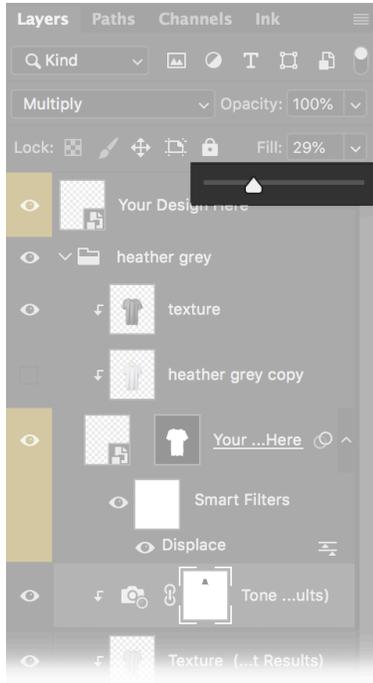

### Step 1:

Open the selected file and navigate the folders. All files are carefully organized and layered to easy access to what you need: **fast edition of the smart objects and place your design.**

### Step 2:

Open the Smart Object: **"Your design here"**. This is the designated layer to include your artwork. Place it, save it and close the opened screen. Automatically your design will be included in the mockup.

## Advanced Edition:

### Step 4: Layer On/Off

Turn On or Off layers to get different looks and results. Depending on your project goal, you can adjust these layers to obtain new possibilities, tones and styles.

### Step 5: Playing with Layer Transparency

Use the “Fill” and “Opacity” features to change the intensity and style of the final design. Layers in these folders can be reduced in opacity to soften the look and adjust the lightning. By contrast, if you need more intense colors, full opacity or 100% will increase the texture influence on the overall mockup scene.

Adjust the levels and get the look you need for your design.

## 👁 Tips for different looks:

### Make use of opacity options for different results and styles.

1. Use full opacity for intense colors and/or darker backgrounds.
2. Reduce opacity in backgrounds to soften the overall lightning.
3. 100% opacity also gives a more saturated and unrealistic style.
4. Shadow opacity: Softer background colors go best with soft shadows.
5. Adjust the shadow opacity levels to get photorealistic results.
