# HOW TO INSTALL LIGHTROOM PRESETS IN MOBILE (DNG FILE FORMAT)

## 1. Download our ZIP file and extract it into a folder

Mac

Windows

2. Transfer the mobile files (DNG format) inside the folder into your phone. You can transfer the files via Airdrop, Gdrive, Gmail, or Dropbox

**Read this only if you plan to unzip the files from your phone :**
- For IOS user, you simply need to double click the zip file on your phone. (If you can't find the .zip file, try to locate it in your "Files" folder)
- For Android user, in some cases, you might need to download unzip app beforehand

3. Open the Lightroom App in your mobile

4. Find the albums section, press + button, and create a
   new album, you may name it as the name of our presets

5. Open the new album, tap on the add picture icon in the
   bottom right corner. Choose either "Camera Roll" or "Files"
   depending on where you saved the DNG files.

6. Select the DNG files that you transferred into your phone just now, and import them into Lightroom

sometimes it's marked as **RAW**,
sometimes as **DNG**
depending on whether you are
an android or ios user

it's fine either way.

ANDROID

IOS

On some cases, if you can't find the DNG Presets in your
IOS / Iphone camera roll, you might need to manually select the RAW folder

7. Go into your album containing your newly imported DNG files, open the first file

CR

8. Now tap on the 3 dots icon at the top right of the screen and tap on **Create Presets**

9. You will see a new preset scene. Give your preset a name, Add it into a preset group (or create a new group). Check all boxes and save your preset by tapping on the checkmark in the top right corner

That's it. Youre done with installing a preset :)
Just repeat the same process for the remaining presets

If you have difficulties / questions, don't hesitate to message me

Thank You
