

## How To Install And Use Lightroom Mobile Presets Without Desktop?

**Step 1: Download the files to your Phone.**

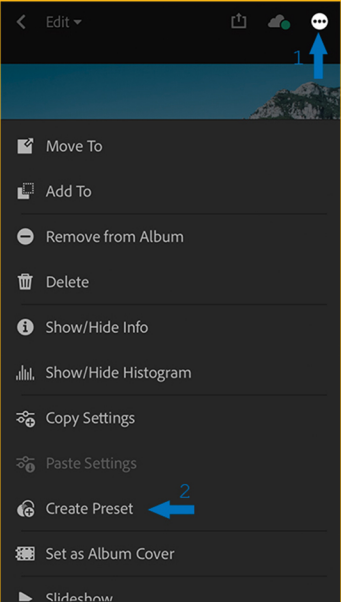

**Step 2: Import the files into the Lightroom app**

Open the Lightroom app and create a new album. In this case we'll name it Matte Presets. Then open the new album, go to Add Photos and select all the DNG files from your camera roll and add them to the album. See detailed steps below:

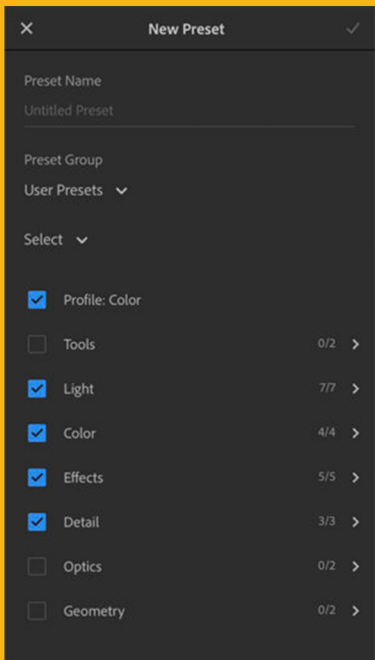

**Step 3: Create and save your Presets.**

Go into the album contains your new imported DNG files. Open the first file, tap on the 3 dots icon at the top right of the screen and then tap on Create Preset.

Next you will see the New Preset screen (shown below) which contains all the options you can use to customize your preset. You can give your preset a name (highly recommended) and the option to choose a Preset Group to save it in. You can save it in User Presets or you can create a new preset group and name it however you like. I recommend this if you have a lot of presets and want to keep them organized. The checkboxes below determine which picture settings you'd like to save with this preset. Only the settings you choose here will be applied to the pictures you edit with this preset in the future. I personally check all boxes except for Tools, Optics and Geometry. The reason is that those parameters vary from picture to picture and I will probably never need to crop or tilt a picture exactly the same way as the preset for example.

When you're done with the settings save your preset by tapping on the checkmark icon at the top right corner. Repeat this step for each DNG file as you will need to save each preset separately. Don't worry, you only need to do this once!

**Step 4: Using the presets.**

To use your new presets just go back into your library and open any photo you'd like to edit. Find the Presets icon in the menu at the bottom of the screen and tap on it. Make sure the Preset Group that's selected is the one where you saved your new presets. If you saved them in the User Presets group, select that. Now you can edit the photo by tapping on a preset from the list and then tapping on the checkmark. You can still continue to edit the photo and make adjustments if you like, after you've applied the preset.
