Drstock_crative

Mockup file that you have downloaded can be used for commercial and private project. You can change the design standards we made by adding your work to this mockup.

- **Tutorial**

This mockup uses the smart object technique in Photoshop. The easiest way to use:

- Open mockup files;
- Then select the 'design' folder;
- Double click on the smart object in that folder;
- Enter or made your design;
- Save smart obecjt.
- For more details, you can see tutorials using mockups and how smart object working. (on youtub*)

- **F.A.Q**

Can I use your mockup on my website for a private or company portfolio? Of course. As long as you modify our files on your computer and publish them on your website as non-editable image files (JPG, PNG, GIF, etc.), there are no limitations for using our mockups.

Can I collect a fee from my clients for modifying a PSD file and sending it to them as a JPG file? Of course. We actually encourage you to use our files to make a profit.
