

HOW TO USE LIGHROOM PRESET AT MOBILE & DESKTOP VERSION

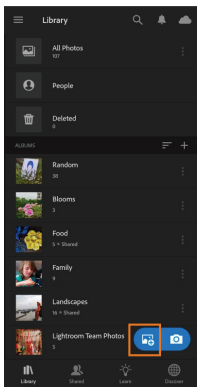

Mobile Version

1. Open the Lightroom app on your mobile device and tap Add Photos.
2. Navigate to the location where you saved the DNG file and select the one that you wish to import.
 - If you are using an iOS device, tap "**From Camera Roll**" to proceed.
 - If you are using an Android device, tap "**Gallery/Folder**".

If you saved the DNG files on cloud storage, tap "**From Files**" on iOS devices and the specific cloud storage folder on Android devices.

Add Photo in Lightroom for mobile (iOS)

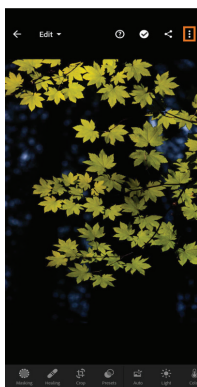

Add Photo in Lightroom for mobile (Android)

3. Once you open the file that you imported, tap the three-dot icon on the upper-right corner of the screen.

Add Photo in Lightroom for mobile (iOS)

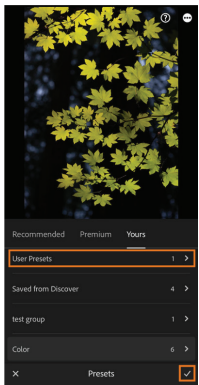

Add Photo in Lightroom for mobile (Android)

4. Tap Create Presets and add a name for your newly imported preset.
5. Add the new preset to a Preset Group of your choice and tap the () icon at the top of the screen to save the preset.

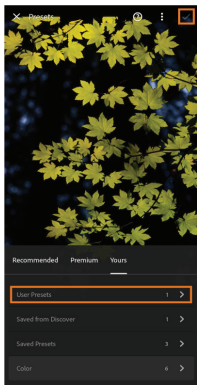

Apply the new preset

You can use the newly added presets on your photos by following these steps:

1. Open the photo to which you wish to apply the preset. Tap the Presets panel at the bottom of the screen.
2. Tap Yours and select the Preset Group in which you saved your new preset.

Add Photo in Lightroom for mobile (iOS)

Add Photo in Lightroom for mobile (Android)

3. Select the preset and tap icon to apply the preset.

Desktop Version

1. Import DNG Files into Lightroom

First, you have to import the DNG FILES into Lightroom.

This process is the same as how you would normally import new photos and folders.

If you don't know how, please follow these steps:

Library > Folders > Add folder > Import

2. Create Preset - Lightroom Desktop

Go to the folder you imported and go to **DEVELOP**.

When you open the first **DNG FILE** from the folder you have imported by step 1, in the develop section, you will see image settings in the right corner.

From these settings you have to create a new preset, to use this preset in the future.

Go to the + next to Presets on the left side in the develop section. And click '**CREATE PRESET**'. Set the name for the preset and save. You don't have to change the settings in this window. Now you have imported 1 DNG Preset into the desktop version of Lightroom. You can now find the presets in the develop section under '**USER PRESETS**'.

These are the steps you have to take for every other DNG Preset you have purchased.
